	When can we take
Which	Gold do they take

Secondary Research **Literature Study**

Literature Study | Players In this Domain

Parameters	Gold loan NBFCs	Banks	Money lenders
LTV	Up to 75 per cent	Up to 75 per cent	>75 per cent
Processing fee	Nil or minimal processing fee; No appraisal fee	- No processing fee and nil/minimal appraisal fee is charged for small-ticket loans; - Both processing and appraisal fees are charged for high-ticket loans	Nil
Interest rate	11-24 per cent p.a.	7 per cent-15 per cent p.a.; 4% p.a. for agriculture loans	25-50 per cent p.a.
Max loan amount	No particular limit	INR3 lakh for agriculture loans	No particular limit
Penetration	High	Low	High

Players in this domain

Mode of disbursal	Cash payment up to INR20,000; above that amount, direct transfer to customer account	Customer must have an account in the bank to avail of gold loan	Cash
Working hours	Open beyond banking hours	10 a.m. to 5 p.m.	Open beyond banking hours
Regulatory body	RBI	RBI	Not regulated
Turnaround time	5 to 10 minutes	1 hour	>10 minutes
Repayment plans	Predominantly, monthly interest payment with principal payment towards the end of the tenure or EMI-based schemes	Predominantly, interest and principal paid in lump sum towards the end of tenure	Monthly repayment, daily repayment
Customer service	Core focus	Non-core	Core focus

Literature Study | Operating Models

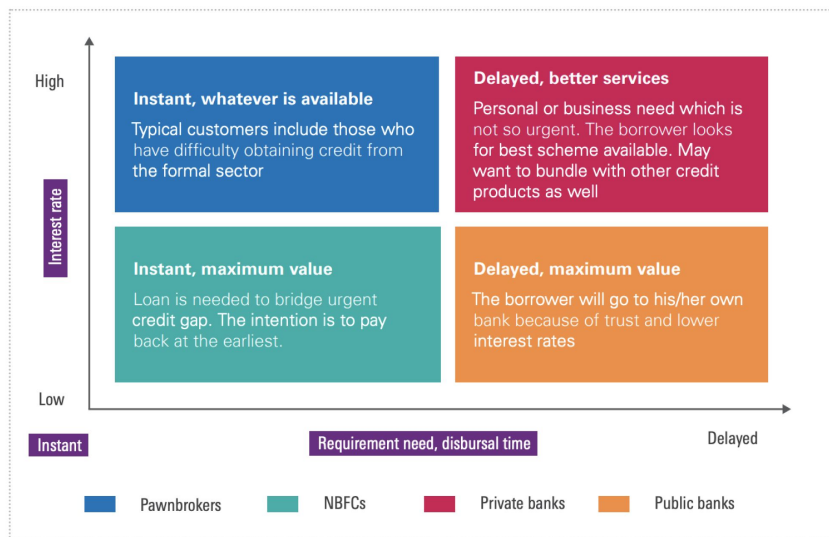

The following are the possible Gold Loan Operating Models

Process	Physical model	Phygital model	Digital model
Loan application	- Branch walk-in - Sales staff.	Same as that of the physical model	Phone call/website/mobile app-based loan request
Gold valuation	Manual/electronic valuation by empanelled valuer or employee at branch	Same as that of physical model	Doorstep manual valuation by loan officer
Loan Processing	- Manual entry of customer data - Paper-based KYC - Physical photographs and signatures.	Same as that of physical model	- Tab-based data entry and scanned image upload of KYC documents - Physical photographs and signatures.
Gold storage	Strong rooms located at branches/hubs	Same as that of the physical model	- Tie-ups with banks for using their vaults - Barcodes and RFID tags for tracking and retrieval.

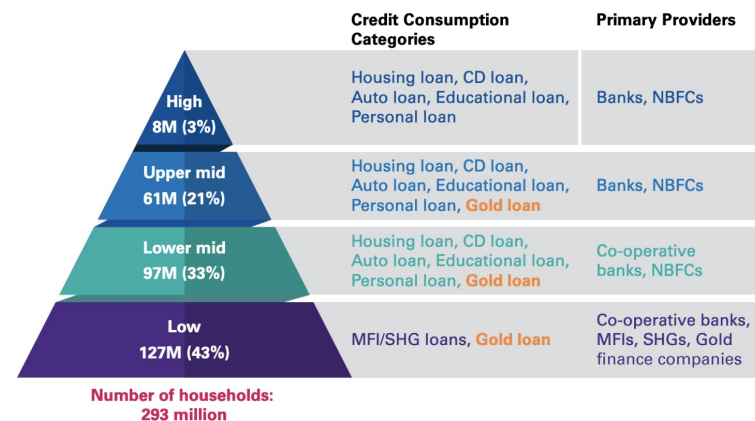

Process	Physical model	Phygital model	Digital model
Loan disbursement	- Fund is ready for disbursement in 15 minutes to a few hours from loan application - Amount can be accepted in cash from branches or will be transferred directly to the customer account.	- Limit will be sanctioned within 15 minutes to a few hours from loan application - Loan amount can be availed of any time by applying online or sending SMS' - Funds are transferred to customer account or can be accepted in cash at branches.	Disbursement to customer account within two hours of completion of basic formalities at doorstep.
Collection	Cash, cheque or DD at any of the multiple branches across the geography of operation.	- Cash, cheque or DD at branches - ECS/NACH - Payment via website/app using debit/credit cards, internet banking and UPI-based payment solutions - Direct transfer from customer account.	- Cash collection at customer doorstep - ECS/NACH - Payment via website/app using debit/credit cards, internet banking and UPI-based payment solutions - Direct transfer from customer account.
Return of gold	Production of pawn ticket at branch post settlement of outstanding loans	Same as that of physical model	Doorstep return of gold within two hours of loan closure

Literature Study | Customer

Catering to varied customer needs

Gold loan customer segments

Understanding the customer segments

It is believed that the organised market had upwards of 60 million active gold loan accounts in 2016

Category	Typical profile	Typical purpose of loan
Salaried middle class	- Regular salaried person with a fixed source of income - Excludes daily wage earners	- Gold loan required to meet a genuine need - Intends to pay back when he/she has a windfall, such as a bonus
Housewives	- Own responsibility of gold in the household - Sentimental attachment to their jewelry	- Need loan to meet household exigency - Attach emotional value to gold, hence there is very low chance of default
Traders	- Local traders dealing in grains, commodities, etc. - Seasonal need of cash for inventory	- Need loan for working capital - Short-term funds for purchase of inventory - Opt for daily interest payment options
Micro-enterprises, self-employed	- Small local manufacturing set-up - Self-employed businessmen, such as kirana shop owners	- Need loan for working capital - Capital expenditure for expanding business

Literature Study | Technology Innovation

Process	Conventional method	Possible technology intervention
Lead generation	- Branch walk-in - Sales staff - Call centre and website queries	- Self-service kiosks in branch and public locations - Mobile application based CRM for field sales staff
Gold evaluation	- Manual valuation by employee or empaneled valuer - Manual entry of weight and purity to loan system after valuation	- Gold valuation machine without manual intervention - Data can be directly passed to loan system for processing
Loan processing	- Manual entry of customer data - Paper based KYC - Physical photograph, signature/thumbprint	- Tab/kiosk data can be directly used in loan system - e-KYC using Aadhaar database - Biometric authentication
Gold storage	- Branch vault storage in zip-lock packets with tracking numbers - Security guard, CCTV and alarm for security	- Barcode or radio frequency identification (RFID) tags for easy tracking and retrieval - E-surveillance system with centralised security monitoring
Loan disbursal	Cash disbursal for loans below INR20,000 and cheque/account disbursal for greater amounts	- Disbursal in overdraft (OD) account with a debit card for easy operations - Small ticket loans in pre-paid wallets/cards
Collection	- Branch based cash/cheque collection model - Repayment via internet payment gateways	- Bank/NBFC mobile application based payment through IMPS/UPI - Doorstep collection using the Government of India's Bharat Interface for Money (BHIM) mobile application

Literature Study | Product Innovation

Innovations in the product lifecycle

Product design linked to consumer needs

- Adopt customer-centric approaches when designing products
- Design and formulate lending rates, repayment structures, tenure and loan value combinations specifically considering targeted customer segments and their needs.

Social media as a channel for customer acquisition

- Budget for targeted paid promotion on social media channels based on buyer personas, given that the number of social media users in India is predicted to be 283 million in 2018.
- Around 70 per cent of rural Internet users use social media
- Around 315 million rural Indians are predicted to use the Internet by 2020.¹

Change in target customer profile: upper middle class households

- In 2014, 12.4 per cent of upper middle class Indian families had some savings or investment in the form of gold compared to 4.4 per cent of middle class Indian families and 2.0 per cent of lower class families (From Middle India to the Middle Class of India: the Path to Success, Mastercard Centre for Inclusive Growth, August 2016)

Mobility and seamless customer connect

- Integrating the different customer touch points: physical branches, website, social media channels, mobile applications, mobile banking facilities, telephone communications, etc.
- Embracing omni channel retailing which leads to more streamlined operations
- Leveraging useful customer insight from multiple channel usage which allows for better customer analysis and product design.

Alliances and strategic partnerships

- Diversifying product portfolio in order to weather risk from contingencies and to provide higher investor value
- Teaming up with entities which provide more cost-effective and better quality non-core services.

Technology enabled lean branch operations

- Reduced cost per unit of key performance drivers (savings account, current account)
- Centralised processing (shifting multiple processes out of most branches to district level)
- District level branches can also specialize in certain functions
- Technology advancements in gold valuation (machines with minimal human intervention) and auctions (online auctions).

Literature Study | Door Step Model

Possible doorstep banking models for gold loan services:

Lead generation to disbursal

- Field staff can value gold at the customer's residence using available tools
- Eligible customers are informed of the LTV amount based on valuation
- Field staff can be assigned an approval matrix to authorise spot disbursements
- Payment channels can be fully digitised

How to adapt to the fintech revolution:

- Create focused customer segments
- Increase digital offerings – online gold loan is the new norm
- Leverage social media presence to build brand awareness and enjoy higher customer mind share
- Disbursals through digital wallets
- Incentivise timely payments through innovative cashback models
- Invest in fintech for customer data mining and analytics for improved credit assessment.

STEP 1

Apply Online

Simply fill in all the required information and submit the form online.

STEP 2

Receive a Call Back

Get a call back from our loan experts on your mobile no. for verification purposes.

STEP 3

Gold Valuation

Visit your selected nearest ICICI Bank branch for the valuation of gold submitted by you for the required loan.

STEP 4

Loan Disbursement

Get easy loan disbursement, within just 45 minutes*

How it works?

- Fill in application form
Enter your personal details in the Gold Loan application form.
- Visit your nearest branch
Carry necessary documents and gold jewellery to the branch for verification.
- Loan disbursal in few minutes
Once your eligibility criteria is met and gold is verified, the money gets credited to your account.

Avail Doorstep Gold Loans in 3 easy steps

Apply for a gold loan
Schedule your appointment

Get your gold valued at your home
Our service representatives visit you at the premises at your doorstep

Get instant disbursal of the loan amount
Money gets credited directly to your bank account

Get a Gold loan in 3 easy steps

Provided by trusted banking partners in the comfort of your home. Instantly.

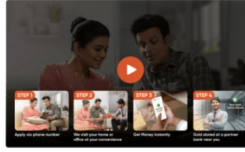

- Book an appointment**
Choose your preferred date and time. Give more details to our loan expert over call.
- Get gold valued**
Experienced On appraisal partner will value your jewellery using touchstone method
- Money Transferred**
Use for online transactions, swipe debit card or withdraw from ATM

How to Get a Gold Loan in under 30 minutes

- Find NEAREST BRANCH**
Walk into any ICICI Gold Loan branch with your gold.
- DOCUMENTS REQUIRED**
Provide your ID proof, address proof and get to get an instant approval
- Simple process and in-house gold valuation**
Simple process and in-house gold valuation ensures that you get the loan amount in your account or in cash within 30 minutes

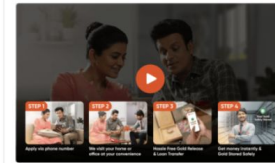

Gold Loan at your home in 30 mins*. 4 Easy Steps

Need a New Gold Loan? With your Existing Gold Loan

Gold Loan at your home in 30 mins*. 4 Easy Steps

Need a New Gold Loan? With your Existing Gold Loan

Get gold loan in 5 easy steps

- 1. Request for a new loan**
Click on "Apply New Loan" above or give a missed call at 1800-125-999-688. Our loan advisor will call you back and guide you through the schemes
- 2. Get doorstep service**
- 3. Money is transferred instantly**
- 4. Gold stored in bank vaults**
- 5. Gold is delivered to you, free of charge**

Simplify the Gold Loan Transfer process

Apply for a Gold Loan Transfer
Our representatives will call within 5 minutes and help you.

Visit your home or office at your convenience
Verify Physical Gold & confirm loan amount with our Sales Manager

quotes	needs	Opportunity gaps	insights
This is a product with minimum documentation and process , so finding USP might be difficult but majority of process and features are almost same across competitos	we need to have USP , which can atleast help sales team to generate more leads and convince customers who wanted to move to other banks		
There is no control mechanism around ROI figures, Branches are not following the protocols, there is no proces control and everything is manual . CUrrently it is resolved by informing higher authority when the ROI is deviated	Control mechanism on ROI		
it is too early to say whether we will be taking help of 3rd party of have own system, wrt door step gold loan, but as per my view the process has to start some where, As a first mover in the market we might have advantage.	To plan who we will be doing home loan evaluation for better product strategy	we might be first player if we start our own at home service	
customers are very pocessive about their ornaments			
2.tehcnological changes which we are trying to bring, how much time it is gonna time once changes are done and how will it reflect on customer - result will be challenging	Technology updation is required to make process simple and effective		
time we are taking to reflect changes - like if we take more time to make it ready and and by the time system might change and we will kot be oving ahead. whatever changes we need to do we need to do very quick	changes which we are trying to brings has to be quick	Think ahead of time so that , market will take time to cop up with us	
policy changing is a dynamic process and tweeking happens throughout the year	policy changes needs to be informed to th whole team		
good product because good capital allocation is zero,lms level are quite low,liquid product, we should agresively pursive this product	Agresively pursue the product		
i cannot comment on USP of our product as i am not sure what exactly it is pitched in the front end and i did not do competitive analysis as well	entire team needs to know the faces and phases of product		
ppl dont go to rupeek not just because of at home model,but would approach confidence of banks it is associated with,every FIntech tries to have a brand name behind them and that will be theier selling proposition.			brand name is required for better growth
RAMP check is regulatory check and HUNTER is negative profiling check, because of these 23% customer comes under STP and manual interventions will be required and this inturns increases TAD time, we are trying to automate this scenario	Reduce manual interventions by automating the process		
Anti money launding team-AMLT , we are trying to automate this as there are multiple outburts and hardle aything is declated in last 6 months			
digital gold is something different which needs to be explored, thing is whether ot is regulatory allowed or not but nothing is impossible . Few years back, no one thught that gold loan at home because it is too dangerous in terms of logistics. but people are doing,this can be treated along with gold coin.NO one is exploring because there is no regulatory,axis bank tied india gold and sellid digital gold			digital gold is a new dimension and if explored we will be the first one in the market
Staff engagement at branch level- staff gives service and confidence at branch level, customer will not come again, even if anything is domne at home and he is made to sit in branch when he comes for evaluation, everything goes for a toss	Make customer come to branch only for necessary steps and rest can be done by user at home		
looking for revamp of gold lona process because we want to be pioneer in gold loan and business volumes are gonns increased, processa re getting re -visited so we habe more STB process so that disbursment will be quick.	better and simple process for quick disbursment	re-visiting the process	
We have limit as 45 min but mostly it is not fulfilled so entire process is been ervampes, sarang is working n it	Not fulfilling 45 min disbursal		
we get this request in common email id as gold loan process, and all branched would send mail on this, as of now we dont have service request but now it is mail managemenet system. There is escalation matrix within operation	we use mail managment sstem for queries which might take time	relook at the process team application so that time is used effeciently

Insights | Affinity Mapping

Dislikes / Problems		
Stakeholder	Users	
High ROI	The ROI of axis bank is higher	High Charges : Ex: if we take 12 laks of loan, 6000(stamp), 10000(ven),600-valuer -16600(total) 1 month of the installment has been eaten and hence customer went to HDFC in the last minute.
Minimal use of technology	Also for part payment the customer needs to come to branch	High preclosing charges - there is no difference between 6 months and 12 months
lot of paper works	Manual entry of forms even after entering digitally	Improper feedback system
Pocess is not fully aligned in all directions	In telangana there is stamp duty of 0.5%.stamp duty	Cutting the money without intimation
To increase the volumes there is a requirement for process change and entire system revamp	Too many dependencies to finish the process	No ownership in the branch
Percentage of new customers are very less	Like other loans gold loan customer dosent get any notifications	caslite issues- customer expects faster process, every other day there is a patch
Axis only focus on existing customers	EMI schedule sheet is not visible in mobile application	Double voucher- sometimes the money gets settles in the pool while renewing
System stability	customer needs to put too many signatures	without intimating the customer their accounts gets sweeped off, Ex: 30 lakhs loan and 1 month delay happend which has been informd to the bank but over night 15laks got sweeped off when 16 lakhs was outstanding amount.

Synthesis

Caslyt System	features
caslyte issues- customer expects faster process, every other day there is a patch	Also for part payment the customer needs to come to branch
double voucher- sometimes the money gets settles in the pool while renewing	
system stability

Case studies / User Voice

- A customer wants 12 lakhs of loan, 6000(stamp), 10000(ven),600(valuer)
Total charges = 16600 hence customer went to HDFC in the last minute because HDFC just has 100 rs stamp duty saying that **charges are equal to 1 month of the installment**
- A customer came for 19,50,000 of loan
customer wants to split into 2 loans one 6 months tenure and another for 1 year tenure
Our system has split the amount as 10,80,000 and 9,80,000 , both the loans were having different ROI which is 9 and 9.5 % respectively.
Customer asking either to **increase valuation of second one by 20,000 or reduce ROI** , we couldn't do both so we tried to hold the customer giving insurance waive off because of the relationship we have.
- A customer came for 85,00,00 of loan, but we have missed the deal because **customer has done his market research** and came to us showing ROI and charges of HDFC and we couldn't find any loophole to hold the customer.

Case studies / User Voice

- A customer has 30 lakhs loan and 1 month delay happened and she has informed in the bank too, overnight 15 lakhs got swepted off when 16 lakhs was outstanding amount without **intimating the customer**.
- A customer has topped up loan last year and even then he was getting calls.18 and 24 lakhs loan got closed just due to unnecessary calls
- Too many customer **calls officers to know the outstanding amount**, they don't want to take these calls. They only want to take calls for new loans.
- why don't we have region wise call center, why is it that half telugu and half tamil guys calls customer and confuse them, it looks like 2 extremes when they compare their tone with ours."educate call center team in chennai team uses foul languages through calls and whatsapp money is in account but still they get calls in 1 day delay".The **call center in the chennai teams uses very abusive language** with customers in phones and also in whatsapp.
- There are more traffic police in the office.
- when amount is paid then mail is send to customer with subject **LOAN RECOVERY** , this word in this industry is like **slang word**

Process

Case studies / User Voice

- Loan-19,50,000
total paid -19,50,000
out standing amt - 20,000
person is in need of money and asking for money or renewal
Present value of gold - 18,95,500
The system **doesn't allow to give renewal/topup**.Also for renewal, the gold is again scratched which customer is not ok with
- Currently a person came for loan on 20th sep, and has left home in between the process and came back again on 21, because he **dosent want EMI date to be on 1st** of every months as he is a govt employee and salary comes by 5th of every month and this is a big problem.We were able to hold customer because of the relationship.
- mahesh babu cousin sudher babu, wanted 70 lakhs GL in covid time and only requirement was **he wanted us to go to home**, which we couldn't do and hence he moved to muthoot.
- An NRI customer has taken gold loan of 24,00,000 with tenure of 12 months. Currently the tenure has been completed but the customer is in Australia and due to covid neither the person can come to branch to **close the loan nor can auto renew the loan**. The customer is sending multiple of mails but even legal team couldn't give any suggestion.This case is still going on.
- After packaging why can't we let customer go, we can go their place and take signature
- Customer **asks for part release** on occasion of some functions of even replacement of jewellery but we tend to close the loan and open a new only if customer can adjust the money

Needs	
To plan who we will be doing home loan evaluation for better product strategy	More personalised application
Give vouchers to users like HDFC gives a voucher which can give discount on home loan for next.6 months	Overdraft gold loans
Introduce simple auto renewal option - through mail, ATM,netbanking	Shifting gold
Closure for 3 months/ 2 months is good with increased ROI but 6 months is not working	Door steps gold loan
OD facility in all branches	Part release of gold
Yearly tenure needs to be increased to 2-3 years esp for NRI customer who will be visiting india for once in 2/3 years.	Replace gold ornaments
Mobile app where most f the activities can be carried out like Muthooth and manapuram App.	Tamper proof vaulting
If customer going to abroad, we can add power of authority in basic terms and conditions only	No charges on part payment
Make sure that everything is visible to the customers	Customised schemes
Top-up	Complementary gold insurance
50% people asks for part release	Good after loan services
Paying part payment online mode	Hassle free repayment
Renewal through online	Incentives like referral etc
Best offers	Paper less operations
Updated and trustworthy APP	Online operations

Case studies / User Voice

- **No marketing and sales**, we need internal approvals to keep banners in our own branch, we are not allowed to tie banners and if tied complaint goes to BM
- It is **too early to say** whether we will be taking help of **3rd party** of have own system, wrt doorstep gold loan, but as per my view the process has to start somewhere, As a first mover in the market we might have advantage.
- We have limit as **45 min** but mostly it is **not fulfilled** so entire process needs to be revamped.
- Our customers are good, they come only due to good relationship
- Previously customers used to talk about private banks but now they are **talking about govt banks** esp after post covid
- Customer patience is indirectly proportional to the customer loan amount
- 20/100 leads gets converted, **most of leads are by reference** and phone calls, the team sits with all and take contacts of the customers
- The best way for to hold the customer is by **finding the loophole in the profile** and pitching our product
- Customer are willing to pay more money but experience is very much important.
- New GLO will definitely need **6 months to understand the system** and get started.

Caslyt System

Process

Need		Opportunity Gaps
very simple product such that anyone can handle and becomes easy for any officer to execute it.	There is commitment that it will finish in 45 min that itself can be a good point and we need to keep it up	Theme of product personalised Trust Incentives/offers Hassle free Transparent
we need to have USP , which can at least help sales team to generate more leads and convince customers who wanted to move to other banks	product should become simple to execute , it can spread to all the branches	Technology: Self-service kiosk in branch and public locations Mobile application based Gold evaluation machines and automatically Doorstep collection
Make customer come to branch only for necessary steps and rest can be done by user at home	varity of product and quick disbursment process	MArketing: penetration in rural india is very much needed distribution: spread gold loan across all branches the mode of relationship should be enhanced so that, our reach is more, and even NTB feels like ETB marketing needs to be improved
more seamless experience	region wise call center	
handling walkin customer when appointmens are schedules	we need to compete even with govt banks

Caslyt System

Process

Case studies / User Voice

- 10:30 customer came
11:13 money got disbursed
11:15 GLO gone to put gold
11:20 OUT OF VAULT
11:35 print taken for welcome letter
11:29 mail send to process team
11:40 customer is given letter after manual entry
11:42 customer left
12:20 got reflected in casalite

The disbursed time is not getting updated in caslite system as soon as account number was generated in finacle after money disbursal, so **technically TAD time is wrong**, this is problem for customer and also officer. Since we have good relation with customer , GLO has taken printout and entered number manually and he was ok with it. this result is more TAD both from GLO and also user.

- No Spl characters in the address- creates confusion while entering and also while customer was verifying he got confused as it is unusual format. Customer has asked for this after looking into the address in the welcome letter and form.

Caslyt System

Process

Problems		
If customer is strict and demands for printed welcome letter, it is a tough job esp when account number does not reflect in the caslyt system	those many screens are not required in caslite system. in all the 7 screens, first screen is not needed only	GL application form keeps changing , this year form was changed 2 times it difficult for us as we got used with a particular form
Too many patch works on. onday which is very busy day and work gets on hold. Till afternoon it will not work and creates a problem. So may e these can be done on weekends. The working link keeps varying.	in the 6 screen when gold value is not 60%, they need to start from beginning and trial is done, if it fails, again we need to restart from page 1	If the user loses welcome letter, then notary needs to be made which other banks dosent have. this is time consuming
		casalite system dosent allow to search using customer phn no , he needs keep the form in front of them. also cant search using cust ID or Saving number. Only loan act number it can search
Hunter will not work at times and delays the process - dependencies on multiple servers	there is no feedback system which can tell the error	
No Auto filling after entering customer ID unlike HDFC	patch deployments on evening will be best	The disbursed time is not shown in caslite system, so technically TAD time is wrong , this is problem for customer and alo officer
Reduce manual entry of data	the ROI fields in the system can be kept blank and editable because this needs to be manually entered, and system can have a limit min and max limit and if values exceeds you can introduce a feedback system	Authorised time or each phase time needs to be displayed

Caslyt System

Process

Problems		
deviation from real time world :No Spl characters in the address- creates confusion while entering and also while customer was verifying he got confused as it is unusual format. Customer has asked for this after looking into the address	dependencies of 3rd party servers :linked to Aadhar website for pulling data and many time aadhar /pan website servers are down , which indirectly effects our system	GLO generally dosent put mail to the process team as he is aware of the template mail they will send, instead he will just wait as he has been used wit the application
CIBIL score will not be be visible until the maker goes to the last page	there are 7 screens in casalite system - applicant name, LTV,Packet no, 60% valuation -- these info they want on first screen so that in 6 screen when it fails, they need to start from page 1	application status is just shown pending , which can be made better by showing micro status of the application
Loading time is an issue while moving from one page to another	person segmentation, helath code and scheme code is creating a fuzz in the customer and not sure of this is actually needed	duedep and posedex system- if customer has dual cust ID, we need to delete 1 which needs to be done at branch level,prev we used to do using SL/SR number but n0w it is not possible.
distance between elements in page is more, hence more movement of hand	Non-uniformity :screens are different from branch to branch, rural to urban, screens or options	when finished profile of customer, system gets logged off
Once entered the data cant be edited , therefore the data needs to be checked properly esp ROI . In a scenario the ROI was mistyped and unable to edit, so the customer asked to pay extra amount to glo	restructure the entire caslite system	In Axis Data entry should be done both physically and digitally, Also same data will be needed to entry again and again. Even we have ihouse account still it asks us to manually enter the the data and there are chances of manual entry

Caslyt System

Process

Needs	
custom EMI dates for the customer	introducing simple data retrieval and search system
Planning the patch works and informing clearly about the updates	introduce a system where the officer itself can work upon to solve queries
reduce dependencies on multiple servers or rely on reliable servers	introduce system which makes customer sits in branch only for mandatory and steps and planning next steps in different channels
Auto fill data	coming up with system which can customer can own it
reduce manual entry	restructure entire system
re look into the format of data entered	more stable, and customised system which can reduce the steps
Information architecture needs to be relooked	system which can offer customised for extreme cases
reduce loading time between application	information design is needed
making application customisable and in sync with the day to day use cases	ROI field can be kept blank
reduce number of verification	understand the minute details of the process and redefine it
searching data using customer phone number	Uniform application across all regions
SHow clear status of the application	prioritise the things so that first things are done first
think of the problems which can arrive and also give alternate solutions	systems becoming more robust to handle entire customer journey
identify more problems in current system	parallel processing systems

There is an internal whatsapp group where people keep posting the problems user faces in caslyt app

Case studies / User Voice

- On renewal also **customer should come to bank**, cant we go and take signature, we need to customise this step, package is not changed nothing is changed but why should customer come?
- Customer CIBIL is generated in between application and then gets rejected- **customer goes mad** in this case. Customer has lost everything that's why he is here for loan then why do we need to check cibil?
- **valuer dosent come on time**, gachibowli branch doesn't have sitting valuer so there is a customer who wants loan immediately, so we only arranged a vehicle and bought him to madhapur branch and got it done. too much time waste. just because of relationship he is here - 20 lakhs loan
- When some case goes for auction, GLO and sales team try convincing the customer but **BM is not giving much support** i this, as he is like why should we take this up?
- I maintain an **excel sheet named MIS** which contains every details and updated status of the users, Not all people will maintain this, this makes life easy to track customer and ans their query very fast, if this is not there we need to checking te registry which is a time consuming process
- why can't rejection and selection happen in first step itself
- why do we have 2 different teams for assets and operation, in ICICI and HDFC this is not the case
- Upto 20 lakhs, we need ITR,CSC approval and therefore it is a long process , If suddenly a customer walkins for 20 lakhs loan and wants ASAP , we fail, therefore we split the money in that case but not all people are comfortable in splitting the money,we have missed 45 lakhs loan in similar manner.

Caslyt System

Process

Problems	Needs	
Process is not fully aligned in all directions	more straight process	introduce Ai so that document can be verified by system so that manual intervention is minimum
we are able to do sizable business but not effective. To take business to double volumes there is a requirement for process change and entire system revamping	Good use of technology, automate process with min human intervention	process with alternate solutions and proper feedback
minimal use of technology	pre planned and schedules process-phygital process	create a process by considering all the extreme cases and considering the entire eco system of product
lot of paper works	revamp entire gold loan process	better and simple KYC process
manual entry of forms even after entering digitally	Better management system for addressing queries	eliminate/minimise forms
customer needs to put too many signatures	reduce number of cases redirecting to process team ,design process such that only exception cases only comes to process team and reduce number of cases redirecting to process team	to identify and reduce unnecessary steps in the process
NO ownership in the branch	like icii we can take picture of customer using webcam	simple process for higher amounts of gold loan
Too many dependencies to authorise	auto approve of request if CIBIL score is good	think of the problems which can arrive and also give alternate solutions
percentage of new customers are very less and axis only focus on existing customers	redefined process for NTB	Flexible process
	precheck for loan can be introduced if in case of a doubt	

Research Insight Statement

Charges

Charges are the first thing which users checks while comparing with other products in the market. These needs to be very **competitive or atleast defensive**.

Communication

We need to make sure that there are **no communication gaps** within all the stakeholders in ecosystem of the product, by providing an effective notification and regular feedbacks through multi channel communication system with a defined and a **uniform tone**.

Research Insight Statement

Product

It is very much required to create a **simple, intuitive ,flexible and competitive product** having our **own USP** ,thereby can penetrate into the market and stand among the competitors. **Personalisation and hassle free** are the key buzzwords in the market so creating a product with this theme can make more impact.

Features

Introducing competitive features in our **product which can justify our charges and services** can help sales team to pitch the product, hold back the customers and also to increase the customer base. Customers do ask for customised features or offers and hence **having best features** can also help penetrate into the market.

Research Insight Statement

Process

To become pioneer in gold loan it is very important for us to come up with **robust, simple and flexible process**, which can align everyone for a single goal. Also we need to infuse technology into the process for **minimising the human interventions**. Before creating a new features, it is very much required to **organise the current process** and then keep adding new process to it.

Platform

To create a Simple ,intuitive and intelligent platform with **proper information design** and feedback system which can act like a **SPOC** for all the activities for a smooth and quick operations. It is very much required to also provide **alternative solutions for predicted problems**. It is needed to **identify more problems** and case studies in this system so that, the new system is ready for all the extreme situations.

Conclusion

Current solution

Digitizing the Gold loan process

Points to Think

Do you think above problems and needs have been addresses in the proposed solution?

What might be the best solution / product directions so that we can solve most of the problems and fulfill the needs ?
