

MB: Pre-login Screen

Guerilla Test Report

Research Team: **Neethu T P, Saad Ahmed**

Head of Research: **Sandeep Kumar A**

Objective

- To **evaluate the overall visual hierarchy** for a smooth and intuitive user experience
- To **access their comprehension of terminology** and to gauge the **need to refine for better user clarity** and clear communication
- To understand the users' perception of the secondary options/links present on the page
- To **gauge users' preference for UI placements** for accessibility

User Profile and methodology

How did we conduct the usability test?

1. User Profile and Demographics

- User cohorts- Axis users and Non Axis users
 - Cities covered- Mumbai, Bangalore, Indore, Nagpur
-

1. Test method

Field visit- Guerilla testing at the Axis Branch

1. Research plan and Prototype

[Research plan.](#) [Responses and analysis](#)

User details

User profile with whom we conduct the guerilla test?

City	Age Group	Users (Axis/Non-Axis)	Total
Mumbai	21-30 31-40 41-50 Above 50	2 (0-2) 8 (7-1) 1 (1-0) 4 (2-2)	15
Bengaluru	21-30 31-40 41-50 Above 50	5 (4-1) 3 (3-0) 1 (1-0) 0 (0-0)	9
Indore	21-30 31-40 41-50 Above 50	1 (1-0) 2 (2-0) 2 (2-0) 2 (2-0)	7
Nagpur	21-30 31-40 41-50 Above 50	1 (1-0) 0(0-0) 0(0-0) 1(1-0)	2

Note: Legends to be noted in the following pages	
All	34
Most	19-34
Some	9-18
Few	1-8

Guerilla test - Glimpse

What is Guerilla test ?

Guerilla usability testing is a **rapid, low-cost method of quickly capturing user feedback** that involves a researchers asking questions about specific areas of a site or application.

Nevertheless, they are usually flexible enough in nature so that they can be adjusted according to the evolution of the user research.

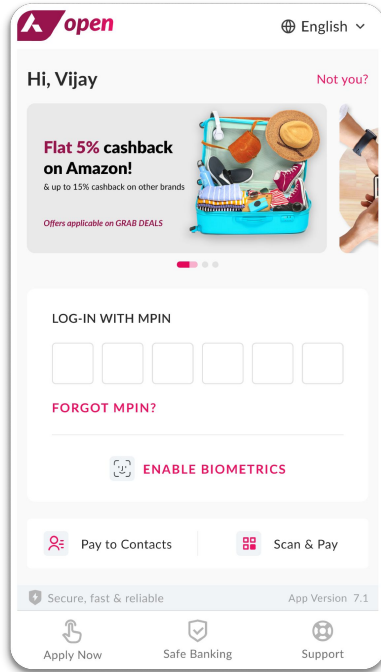

The test plan is loosely structured around specific key research objectives or hypotheses.

How many participants are required?

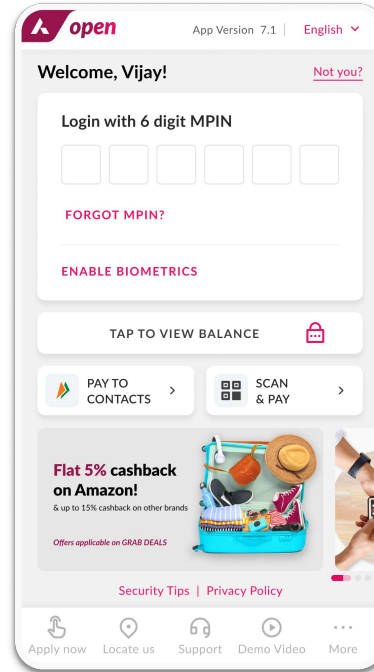

The number of participants can vary from between **6 to 12**, depending on where and when those sessions are conducted.

Participants are **not normally formally recruited in advance** based on detailed criteria, but rather approached on the day and asked to take part.

Screens

Option A

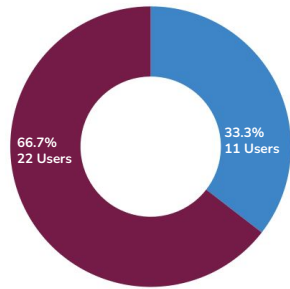

Option B

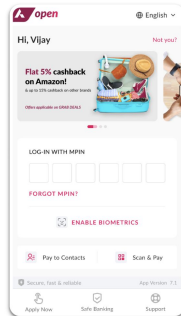

Major Insight

An overview from the study

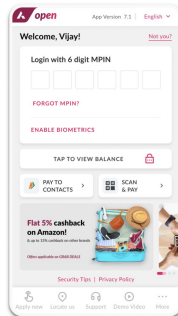

● Option B, Look and feel ● Option A, Look and feel

- The **majority of users favored Option A** due to its **subtle and minimal visual appearance** compared to Option B, However **Option B gained preference for its overall information hierarchy, prominence of UI elements, and the use of familiar icons** in the bottom bar.
- Users noted that **UI elements in Option B stood out more prominently**, attributed to **subtle details** like the use of **capital letters**, **familiar icons**, and **underlined terms**, which effectively captured their attention.

Option A

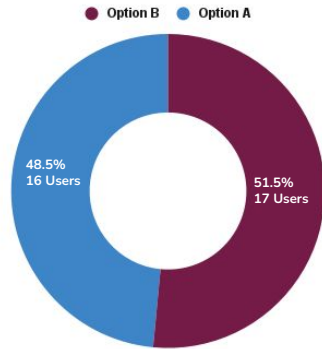

Option B

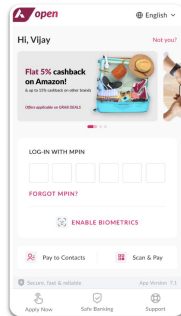

Ads

An overview from the study

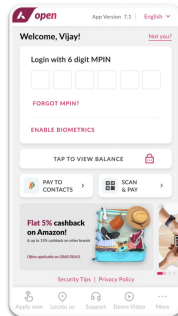

Users held varied opinions regarding their preferences for ad placement. Approximately half of the users believed that placing the ad in the upper section would enhance the accessibility of the login section. On the contrary, the remaining users said that the priority should be given to the login section, as the primary purpose of the page is to facilitate user login, with the ad banner following thereafter.

- Few users disapproved/ **questioned the need of having the Ad Banner** on the pre-login screen, expressing **concerns that it distracts from the primary purpose** of the page and contributes to clutter.

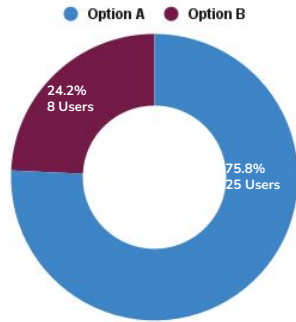

Option A

Option B

Language CTA

Noticeability and preference of Language CTA

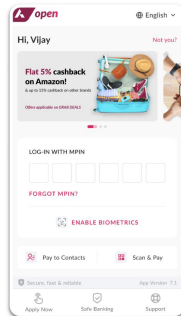

→ Noticeability

The Language Switching CTA had minimal noticeability for some users, as they only observed the element upon closer inspection. This was due to the CTA having lower prominence, and the initial visual hierarchy emphasized either the banner or the login, catching the users' attention at first glance.

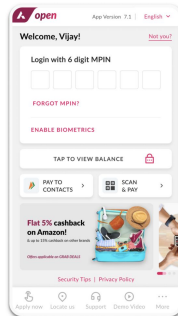

→ Preferences

Most users favored option A, where the CTA featured an icon, as the global icon conveyed the sense of offering multiple languages. However, some users found option B appealing, noting that the CTA stood out due to being highlighted in a different color.

- Some users recommended **enhancing the visibility of option A** by emphasizing the CTA (both text and the icon) **with a different color**, similar to what was done in option B.
- Few users mentioned **enhancing the visibility of the CTA by increasing the font size**, which can help prevent the CTA from being overlooked at first glance.

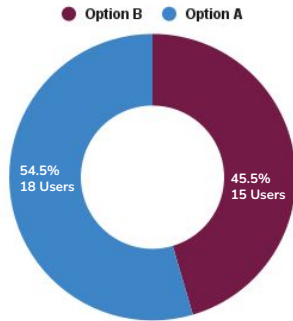

Option A

Option B

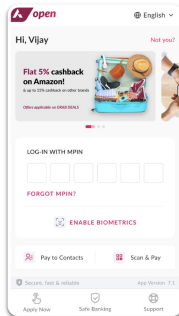

Login with M-Pin

Preference of Login option on screen

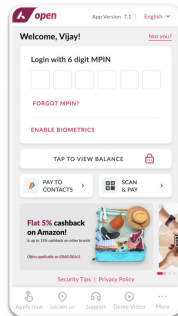

→ Users objectively expressed their preferences for the placement of the login section. Approximately half felt that positioning Login at the bottom would enhance touch accessibility, while others held a firm belief that the login section should be the primary focus, as their visual hierarchy starts from the top and descends to the bottom, emphasizing that the first thing they should encounter is the login feature.

- The **majority** of users who chose **Option A** were **primarily focused on accessibility**. However, a **subset** of these users believed that placing the **Login feature in the middle** would not only **enhance accessibility** but also **contribute to a clean appearance, minimizing the distractions**
- The remaining half of the users believed **that the primary purpose** of the screen should be **centered around the login process**. A **few** of them said that the main focus should be directed towards the login section, as they **perceived the ads to be irrelevant** and to be of little value to them.

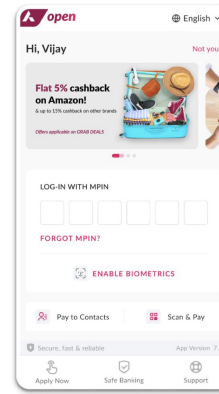

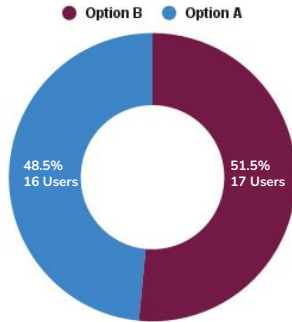

Option A

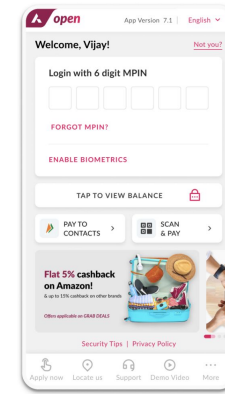

Option B

Greeting

Preference of greeting type

Option A

Option B

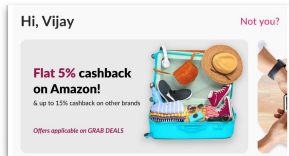

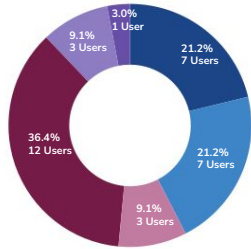

→ The response to both greeting messages was nearly evenly divided in terms of preference.

- A significant number of users regardless of the age groups found the message "Hi Vijay" to be more personalized and friendly.
- On the other hand, some users expressed that the term "welcome" conveyed a sense of invitation and hospitality, making them feel more at ease on the platform.

Not You

Preference of Language

● Switch account ● Not You itself ● Change account
● Change User ● Switcher User ● Other user / Guest

Option A

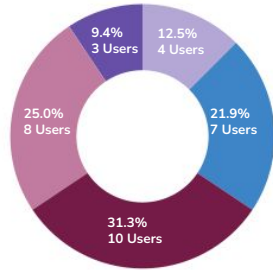

Option B

- Upon encountering the phrase "Not You," users' initial response was often along the lines of "It's not me." The majority of users were able to successfully comprehend that the term indicated the option to switch or change the current user.
- Some users could relate to the term "Not You" because they had encountered this term on the confirmation screen during the Google login process. This prior familiarity contributed to their understanding of the term in the current context.
 - When seeking alternative suggestions for a more **relatable term in the context** of changing users, some of the terms majorly proposed included "**Change user**" and "**Switch account**".
 - Few users suggested that **increasing the font size** would make the **term more prominent**. A few others also emphasized that **underlining the CTA** provides **greater visibility** compared to the other option.

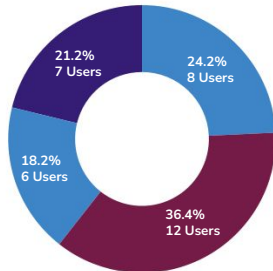

View Balance

Frequency of Usage and Preference of viewing on the Prelogin screen

● Never used ● Sometimes ● Often ● Rarely
● Wont prefer using it

● Not necessary ● Good to have ● Not Require ● Require

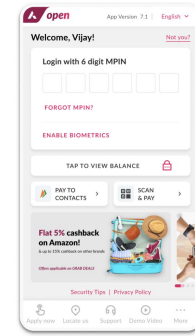

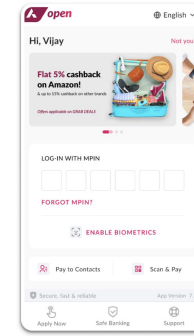

→ Frequency of usage

There was a significant number of users used the View Balance feature regularly, finding it convenient with just one click. Another group, though less frequent, also found the feature useful. Both groups mentioned the simplicity of this approach compared to other payment apps that often involve multiple steps and require an MPIN to view the balance.

- Some users either **haven't utilized the feature** or chose not to use it in the current app. The reasons varied, with some mentioning that it was **frequently overlooked** due to the **overloaded UI** of the screen, while **others perceived it as less secure**.

→ Preference of Viewing

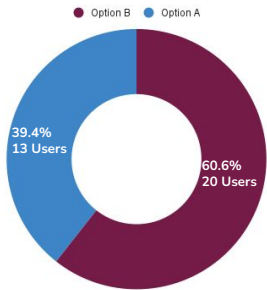

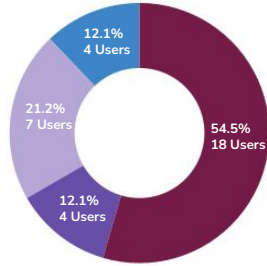

“Tap to view Balance” had a differing opinion among users. Those who preferred seeing the balance on the pre-login screen believed it facilitated a quick view with just one click. Contrastly, others expressed apprehensions about the security and privacy issues associated with this option.

UPI Services

Preference of Viewing and placement of UPI services on the pre-login screen

● Good to have ● Not necessary ● Not Required ● Require

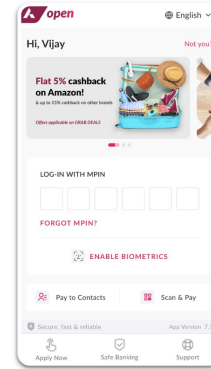

→ Preference of Viewing

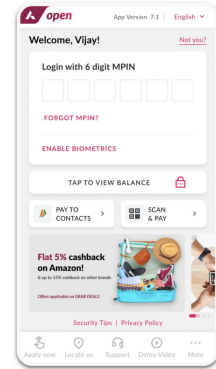

The majority of users **appreciated having the UPI Payment** feature on the Pre-login page, while a **subset stated that it wasn't required** for them because they **use other payment apps**.

→ Preference of Placement

The majority of users **preferred option B** as it **addressed both visibility and accessibility** concerns by positioning elements towards the centre of the screen. while **others preferred option A**, stating its **easier accessibility to touch**.

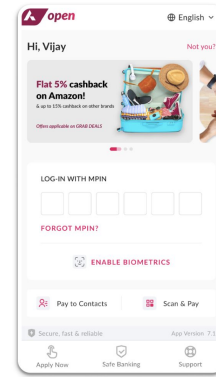

Option A

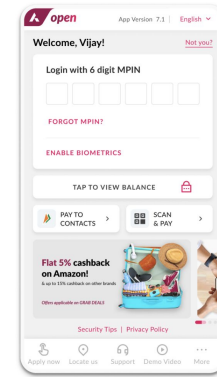

Option B

UPI Services

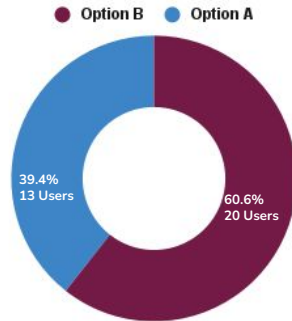

Preference of location of UPI services on screen

Option A

Option B

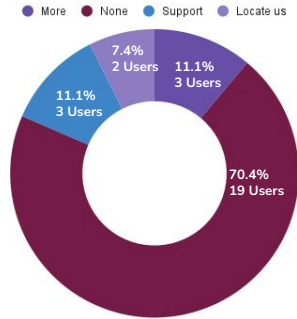

→ The majority's preference for the icons in Option B unequivocally establishes them as the clear winner.

- A significant number of users **identified with the icons in Option B**, finding them **relatable** as they resembled those used **in their current UPI apps**, making them **easily recognizable**.
 - Some users highlighted that the **relatable icon provided them with assurance**, ensuring that they wouldn't make any mistakes while making payments.
- **Some users** expressed a preference **against option A**, primarily **citing its small size**, which led to **difficulties in locating** it amidst the abundance of information on the page.

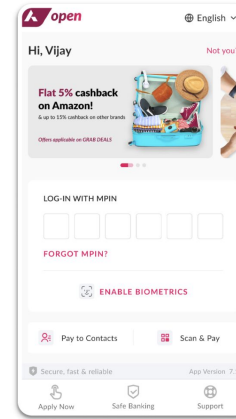

Bottom Navigation Bar

Frequently used option and Preference of options on the bottom bar

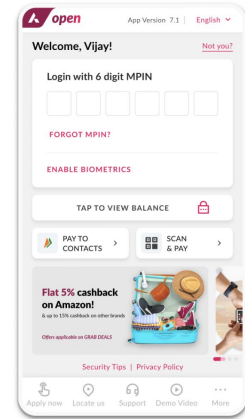

→ Frequently used options

Approximately **70% of users** haven't utilized any of the options in the bottom navigation bar, as they **didn't perceive a need** for these features at the pre-login stage. Some **overlooked these options** as their **primary focus** was to login.

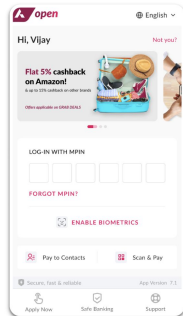

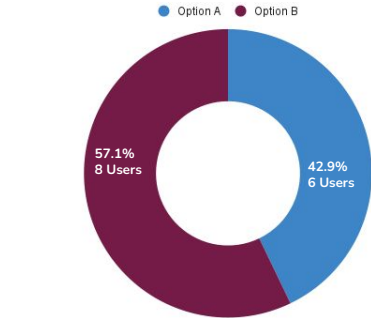

Option A

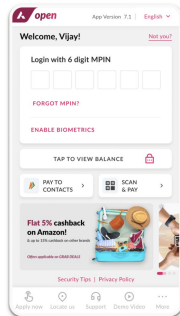

Option B

Bottom Navigation Bar

Frequently used option and Preference of options on the bottom bar

Option A

Option B

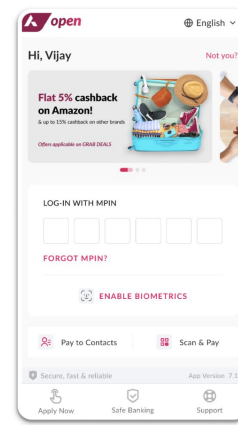

→ Preference of Options

Users had **diverse preferences for viewing** the options due to various reasons. The majority favored **Option B** because it featured **familiar icons** that users could easily relate to. Meanwhile, a significant number of users opted for **Option A**, appreciating its **less cluttered appearance**.

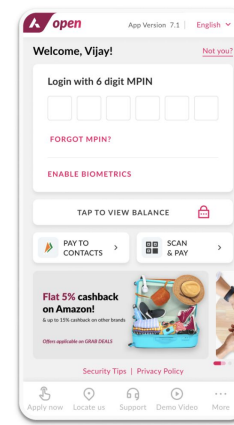

- Users who opted for **Option A**, which had only three options, raised concerns about the **choice of icons as they found it challenging to relate to them**.
- Some users noted that **"Safe Banking"** was a relatively **new term and did not feel like a clear CTA** but rather **resembled an information page**.
- Users between the ages of 25 and 35 largely disregard **Demo Videos**, as they are accustomed to using fintech apps.
- Users 45 and above preferred opting for help/support when needed rather than considering **Demo videos**.

Apply Now

Comprehension of Apply Now

Option A

Option B

- The term **"Apply now"** was interpreted by some users as an option to apply for various **banking products such as credit cards, loans, or other banking services**. However, a **few users found it unclear** whether it specifically referred to **applying for a bank account**.
- Some users expressed that the **term lacked clarity in conveying its purpose**, and they suggested that terms like **"Banking and Services"** or simply **"Services"** could be more **relatable and clearer**.

BB *Maybe apply for loan. but it is not communicating it properly. Banking services can be used instead of this-*
34Y, Non-Axis User, Mumbai

Research Suggestions

- **Advertisement color choice and relook its requirement on the prelogin screen.**
 - The placement of ads is considered as less significant as long as the login feature stands out prominently.
- **Relatable terms and prominence of UI Elements could make the screen more user friendly.**
 - The term "Apply Now" needs to be reconsidered.
 - Icons for "Language" and "Pay Contacts" should be re-looked at for their visual hierarchy and appeal.
- **Option A, with its stronger visual hierarchy, could emerge as the preferred choice.**
- **The "View Balance" feature could be presented as an optional element.**
- **Since the bottom bar is the least utilized and bar, we can consider minimizing the bottom navigation.**

Thank you for your time
