AVC Agent Interview Report

Research Team: **Saad Ahmed , Raja Sandeep**

Objective

- Identifying **specific pain points** in the onboarding process.
- Aiming to gather **insights into user behavior** during the application process at the **profile section**.
- Uncovering any **technical glitches** or issues that may contribute to drop-offs.
- Gathering information on any **specific patterns or trends observed** during onboarding.

User Profile and methodology

How did we conduct the interview?

1. User Profile and Demographics

- User cohorts- AVC agents at AVC centres
 - Cities covered- Ahmedabad, Mumbai, Hyderabad
-

1. Test method

Field visit- AVC centres of Axis Bank (Mumbai & Hyderabad)
Focused group discussion online (Ahmedabad City)

1. Research plan and Prototype

[Research plan](#) [Responses and analysis](#)

☒ I agree to [Terms and Conditions](#) for WhatsApp Banking.

Submit

Non-Intuitive OKAY cta

"OKAY CTA is not intuitive but this do not create a problem because of the word OKAY, as there are no similar word to okay on the screen"

"It will demand a guidance from us but they can identify it and very rarely people miss this out. The clue which we give to the user is the colour of the popup."

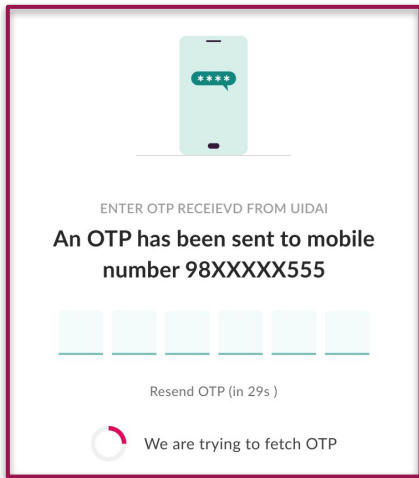

OTP Issues

Customers going to their message box for OTP can disrupt the login process, leading to form logouts.

"There are cases where customer goes out of application to message box for OTP and then makes customer to log out from the form"

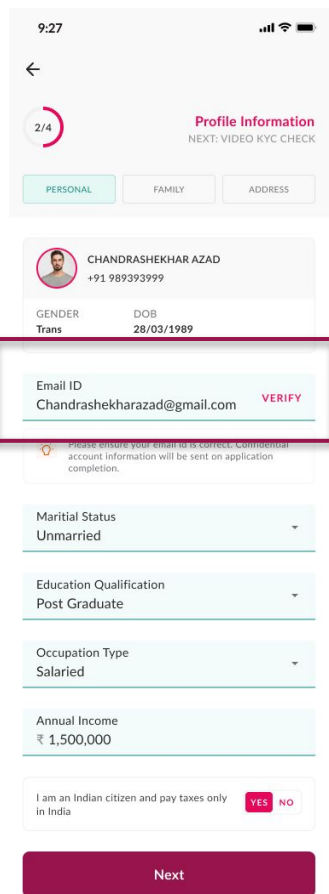

"HYD center people are tackling this problem in different way " we say customer to wait for OTP they will try to go out of application, instead if we say them to wait in the application for 2 min, OTP will come autofill will happen in most of the cases"

"Customers at times receive multiple OTPs at a time and enter the wrong ones leading to errors."

Research Recommendation :

An in-app OTP retrieval mechanism could mitigate this issue.

A mobile application interface for profile verification. At the top, the time is 9:27 and the status bar shows signal and battery. A back arrow is in the top left. A progress indicator shows 2/4 steps completed. The title is 'Profile Information' with a subtitle 'NEXT: VIDEO KYC CHECK'. Below are three tabs: 'PERSONAL' (active), 'FAMILY', and 'ADDRESS'. The main section displays user details: a profile picture, name 'CHANDRASHEKHAR AZAD', and phone number '+91 989393999'. Below this, 'GENDER' is 'Trans' and 'DOB' is '28/03/1989'. The 'Email ID' section shows 'Chandrashekhharazad@gmail.com' with a red 'VERIFY' button highlighted by a red box. A warning message states: 'Please ensure your email id is correct. Confidential account information will be sent on application completion.' Below are dropdown menus for 'Marital Status' (Unmarried), 'Education Qualification' (Post Graduate), and 'Occupation Type' (Salaried). The 'Annual Income' is listed as '₹ 1,500,000'. At the bottom, there is a checkbox for 'I am an Indian citizen and pay taxes only in India' with 'YES' selected. A large red 'Next' button is at the very bottom.

Non-Intuitive “Verify” CTA

Despite its importance, users struggle to identify the “Verify” CTA for email spell-checking, even with guidance.

“This is an Important CTA as it avoids spelling mistakes while entering Email ID”

“Even when we are guiding the user to click on the verify button, they are taking time to identify it”

“Marital status and educational qualification are not needed only”

Research Recommendation :

Enhancing its visibility or intuitiveness could streamline the process and boost user engagement.

Misinterpreted Term **"Annual Income"**

Users with limited literacy frequently confuse "annual income" with "monthly income" due to their unfamiliarity with the term "annual." This confusion often results in errors when submitting the form, leading to drop off in the process

"User Gets confused with this term and enters monthly income, this could lead to drop off if annual income does not serve minimum values"

"Its best if we replace word annual by yearly"

Research Recommendation :

Offering alternative terms could improve form completion accuracy and understanding.

Confusing “Back” CTA

Despite standard UI practices featuring a back arrow and Call to Action (CTA), users' habitual navigation methods, such as swiping or using bottom back buttons, increase the likelihood of unintentionally exiting the journey. This leads to user frustration and necessitates repeating the entire process.

“Users are getting confused with phone back button and app back button”

“When we guide users to click on back button, then click on phone back button and there are cases where application gets exit”

“Either use back button of phone as app back button”

Research Recommendation :

Offering alternative terms and pattern for back CTA. for instance replacing word back with previous.

Confusion between first and last name

Users occasionally interchange their first and last names, causing errors during form submission as it conflicts with the uploaded ID card information. This issue contributes to drop-offs in the process.

"People get confused with first and last name, possible cases of error are:

- 1.interchanging first and last name*
- 2.writing full name in both the fields"*

"Fathers and mothers name can be autofilled from aadhar and PAN"

"Enable Auto-Fill of data wherever possible"

Research Recommendation :

Enable Auto-fill of data wherever possible

Session gets expired while filling the form

"During filling forms, if session expires, they have to repeat the long process it all over again they said and it was frustrating."

Form is "Too Long"

"The screens require users to fill too much information which is not the case with some other banks."

"The long process can be shortened if most data like parents name and address details can be auto-fetched from AADHAR and PAN card during initial stages"

"When we can fetch these details from Aadhar and PAN , this step can be skipped or maybe included at the end"

Research Recommendation :

Enable Auto-fill of data wherever possible.
Form should contain only mandatory information, rest we can fetch after opening the account.

Add Nominee

Nominee Declaration post V-KYC

"The screens necessitate users to input excessive information compared to some other banks."

"For instance, Nominee information could be deferred until after V-KYC or at a later stage, a practice adopted by SBI."

Research Recommendation :

Add nominee can be made compulsory after opening the account.

Permission Issues

Numerous customers abandon V-KYC processes because they struggle with enabling device permissions for microphone and camera. This challenge arises from their unfamiliarity with these settings, which they infrequently use on their devices.

"In chrome browser audio and video permission will be disabled, we will guide the customer to click on the small icon in browser and enable audio connection. Because the icon is small and not in similar shape, customer can't identify icon, or they by mistake click on the web bar hence link gets broken"

"IOS creates more problem as we are not aware of IOS settings"

Research Recommendation :

If we can provide a CTA which can enable the settings, it would help a lot.

Quick check for Video KYC

 Keep your original PAN card ready

 4G/Wifi internet

 Well lit with minimal noise

 A blank paper and a pen for signature update

☐ I agree to all applicable [Terms & Conditions](#) related to video KYC process

Get a call back

Connect to an Agent

BEING ASSISTED? ENTER AGENT ID

Non-Intuitive "Being Assisted" CTA

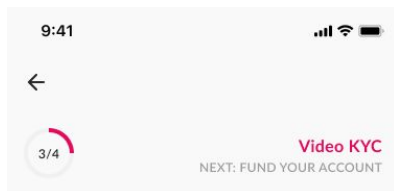

Most of customers have difficulty locating the "Being Assisted" button, leading to accidental closure of the application.

"Also because it is in bottom, users click on home page instead of being assisted and this closes the application"

"Even when we are guiding the user to click on the being assisted button, they are taking time to identify it"

Research Recommendation :

Repositioning it to a more visible location on the screen and using clearer labeling or visual cues to differentiate it from other options is needed.

Quick check for Video KYC

-  Keep your original PAN card ready
-  4G/Wifi internet
-  Well lit with minimal noise
-  A blank paper and a pen for signature update

BEING ASSISTED? ENTER AGENT ID

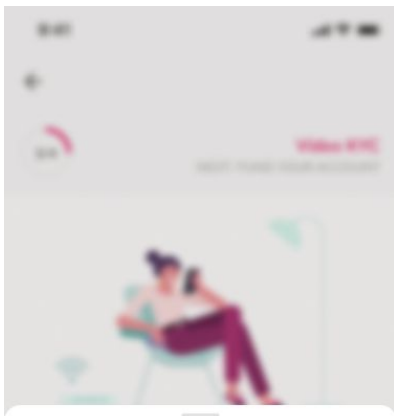

Documents are not available

Even though it is clearly mentioned regarding documents they need to have, most of customers won't be ready with the documents.

"Though it is mentioned customers does not keep the documents ready with them, which we need to show during V-KYC. because of this also there are lot of drop off"

Research Recommendation :

We can introduce a check box, where customers will check box once corresponding document is ready.

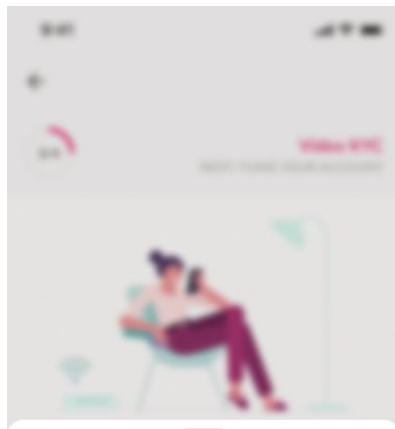

Agents Busy

Our agents are busy at the moment

Don't worry, we've received your request for a video call. On availability, our agent will get in touch with you on your registered mobile number on priority.

Go Home

Non Working Hours

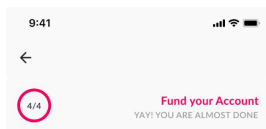

Inconvenience regretted. Our agent will call you at the next availability to assist you in completing video KYC

Physical card is different from virtual debit card. Delivery TAT of physical card is 7 working days.

☐ I hereby declare that I am funding this savings account from a KYC compliant account of which I am the individual/joint account holder.

Proceed to Fund

Existing account with KYC Compliant

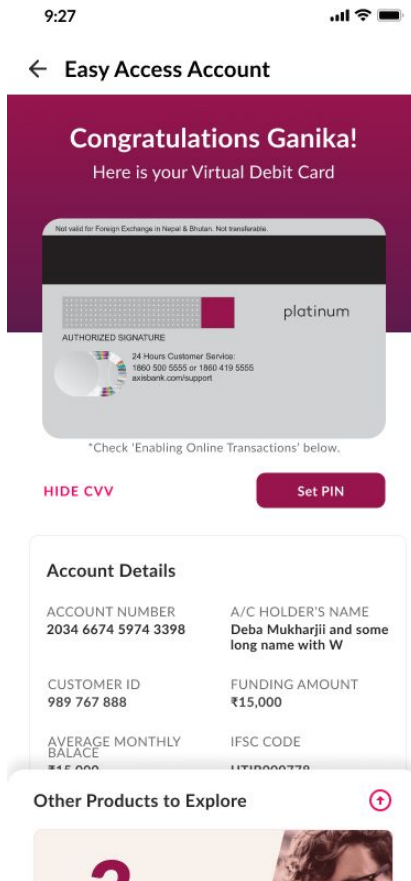

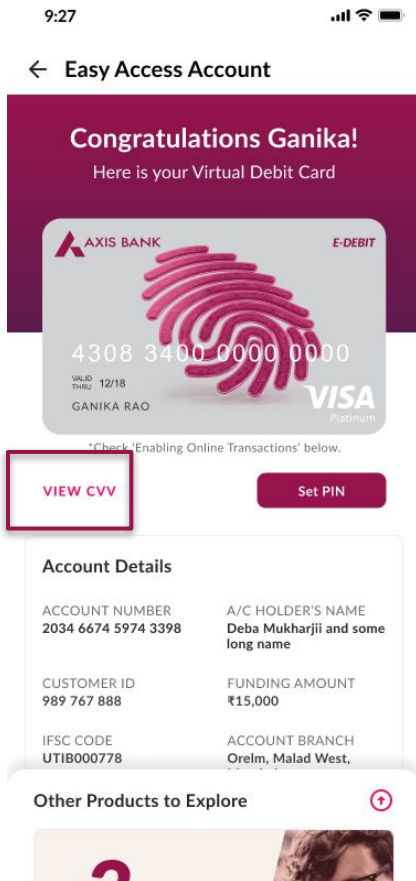

Users without existing bank accounts often resort to paying the funding amount through acquaintances, violating the declaration.

"If user doesn't have existing bank account then they pay the funding amount from their known ones, this is violating the declaration below"

"Its difficult to convince new people to do against declaration "

Research Recommendation :

There should an alternative and formal step for users who do not have any existing bank account.

Visibility issue CVV

"View CVV is not given any preference hence customer will miss this option and they will call us again to ask CVV number"

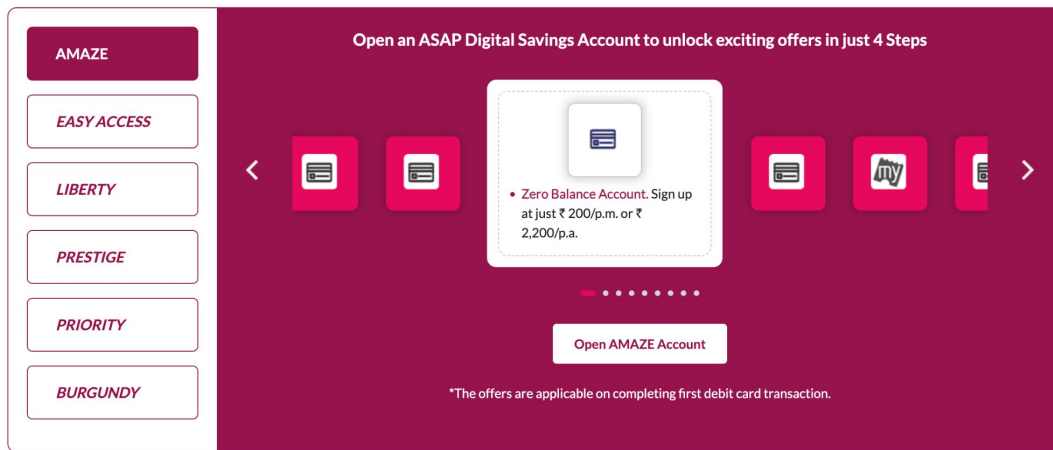

"After SET PIN customer are taken to rating page and will miss CVV option"

Research Recommendation :

View CVV can be made mandatory for the users

WebSite

Initial Funding: ₹5,000

Debit Card fees: Nil

Plan Charges: Monthly: ₹200/month (6 months minimum)

Annual: ₹2,200/year

It's actually not zero balance account

These points underscore the importance of enhancing communication on the landing page regarding account prerequisites.

- Only Less than 10 % of customers are aware of initial funding
- 15-25% people gets convinced in calls and gets converted to open account
- 60-70% people claims for wrong claims of zero balance account and drop off

"It is not mentioned upfront that this is not a zero balance account", "We need to make this clear in the website"

"60% -70% of the assisted user drop off at the last step where we ask them to pay funding amount as they were not prepared for this"

Easy Access Digital Savings Account	
Initial Funding: As Stated Below	Average Balance Requirement
Metro: ₹16000/-	Metro: ₹12000/-
Urban: ₹15000/-	Urban: ₹12000/-
Semi Urban: ₹6000/-	Semi Urban: ₹5000/-
Rural: ₹3000/-	Rural: ₹2500/-
Virtual Debit Card fees : Nil Physical Debit Card Joining Fees :500+GST Physical Debit Card Annual Fees : 500+ GST	

In-house Fraud cases

Customers attempting to enter the pincode of the nearest rural area to avoid charges contribute to drop-offs during

"There are cases where branch people guides the customer to enter the wrong address with wrong pincode, this can create problem in future"

"Customers try to enter pincode of the nearest rural area in order to escape from the charges and this goes to drop off during V-KYC"

Miscellaneous

Spam calls

"There are instances especially college students who apply for account and attends V-KYC video call, on a daily basis and will not proceed further to open account."

"If V-KYC gets rejected more than 3 times, we need to block customer or ask to visit near branch"

Research Recommendation :

Create some rules for the re-appearing for V-KYC Process

Existing Relationship

"If Customer already have a relationship with axis with credit card, there will be customer ID generated. Now if same customer open account then until every process is completed we will never know this fact. This can delay process of access new account if email for credit card and account opening is different"

"We can give an option to customer to ask if they are having any existing relationship and then ask if they want to create new CISID or Use old CISID"

"If they are existing relationship then we can pull the data to avoid few steps in the process"

Research Recommendation :

Create a process of opening account for existing customers

Account shifting

"If customer have clicked on open salary account accidentally instead of savings account, they will only realise this during KYC and this also goes into drop off"

Research Recommendation :

There should be an option to switch between type of account the customer need or an option where customer is informed about the type of account being selected .

D.O.B mismatch

"There are many cases where DOB mismatch between aadhar and pan card, when we know there details why can't we tell to customer in step 1, we tell this to customer in V-KYC and this accounts for drop off"

Research Recommendation :

DOB mismatch can be informed to the customer after step 1

Device Compatibility and Technical issues

- 1.If customer opens back camera then audio gets disabled, this happens in 20-30% of cases*
- 2.Time to upload pan card takes lot of time even if our internet and customer internet is full (100 points)*
- 3.Since customer attends V-KYC through phone, the audio is not clear for them hence they cant hear properly and this creates a delay.*
- 4. Microphone malfunctions during camera switching for document verification in V-KYC, often requiring device changes.*
- 5. Server errors, network errors, and URL rejections prompt customers to change their devices, particularly noted on OPPO, VIVO, and iPhones.*

Axis One

"The only impact this has created in building trust in the customer as they download app instead of clicking on a link"

Research Recommendation :

Give an option to install app in the website, so the process happens on the app instead of browser.

Live Location

"We ask for live location and ask customer to click on allow

- 1. This gets expired if customer doesn't click in less than 2 minutes*
- 2. Also few users fail to click it within time."*

"When live location is compulsory , why do we need to take permission of user again, instead we can inform that we are capturing your live location"

Research Recommendation :
Instead of asking permission, we can inform the user and capture the live location.

Other observation

1. Ideally it takes 5 min to finish this process and this can go to 15 min sometimes with extreme users.

2. 90% of customer are android users, rest 10% account to IOS and desktops

3. Enter communication address is repetitive

4. In salary account opening location is captures before step 1 and also during V-KYC. there are many cases where both these locations are not same due to multiple reasons. This also accounts to drop off.

Cumulative Research Recommendations

- Introduce in-app OTP retrieval method
- Enhance visibility of VERIFY CTA to boost user engagement
- Offering alternative term for word “ANNUAL INCOME” is a need, maybe replace it with “yearly income”
- Offering alternative word and pattern for BACK cta is a critical need
- Enabling Auto-Fill of data where ever possible
- Asking customer to fill data which is mandatory and rest can be captured during onboarding
- Adding Nominee can be introduced during on-boarding process

- Audio and video enabling setting can be made in-built in the app
- BEING ASSISTED cta needs to be repositioned for better user identification
- Introduce check box to keep documents ready during the VKYC
- There should be an alternative method for initial funding esp for users who do not have an bank account
- View CVV Cta needs to be more intuitive
- Initial funding details might be needed to put up-front, but this is a business call

- Some rules needs to be created for no of attempts for V-KYC process to void fraud calling
- We need to come up with process of opening the account for customer having existing relationship with the bank
- There should be a step where we make the customer aware about the type of account the customer is opening.
- DOB mismatch error can be conveyed to the user in the step 1 only.
- Give an option to install the AXIS one app
- Instead of asking permission of user to capture live location, we can inform user and capture it directly.

- The **accessibility of the APP needs to be enhanced with the motto of making the app Talk friendly**. I.e the agents should be able to speak out the app loudly without any confusion.
- We need to take a call whether the initial funding is shown to the customer upfront or not.
- There should be a distinguishing between permanent and communication addresses, resulting in identical entries for both.
- Auto save the form so that we can avoid repetition of steps which is frustrating to the user.
- During the cases where we are sending multiple OTP we can give an indicator so that user can recognise later OTP
- The Agents fill the reason for dropoff in their tool. It would be great if we can get those data and analyse reasons for drop off
- The secondary button needs to be more intuitive

Thank You
