

Research Report

Memory Lane

2025 Year End Campaign

Contents

RESEARCH PLAN OVERVIEW

RESEARCH GOAL

USER PROFILE & METHODOLOGY

MEMORYLANE (YEAR END RECAP)

Research Goal

To understand how users discover, experience, and perceive the **Memorylane Year End Recap** campaign, including its relevance and usefulness to them.

1. Assess awareness and discovery of the campaign
2. Observe user behaviour and engagement patterns during interaction
3. Understand motivations for participation and reasons for drop-off
4. Evaluate perceived usefulness, relevance, and personal value
5. Identify opportunities to improve engagement and overall experience

User Profile and methodology

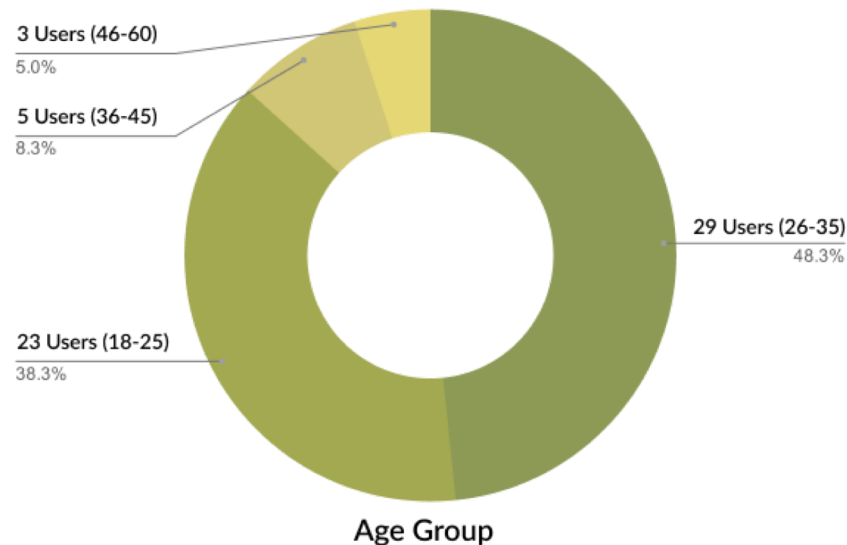

- **Mixed method approach:** Usability testing + in-depth Interviews
- Participants recruited via **survey outreach** and **convenience sampling** (walk-in branch visitors, friends, family)
- Study cohort: **20 participants** (mix of usability testing and interviews)
- Total: **60 survey responses**
 - **9 opted in for interviews**
- Session duration: 20–30 minutes

Sr.No	Age	Location	Tier	Session Type
1	26-35	Badlapur	Tier 2	Usability Testing
2	26-35	Badlapur	Tier 2	Usability Testing
3	26-35	Badlapur	Tier 2	Usability Testing
4	36-45	Badlapur	Tier 2	Usability Testing
5	26-35	Nagpur	Tier 2	Usability Testing
6	26-35	Nagpur	Tier 2	Usability Testing
7	26-35	Nagpur	Tier 2	Usability Testing
8	26-35	Nagpur	Tier 2	Usability Testing
9	18-25	Bhubaneshwar	Tier 2	Interview from Survey
10	26-35	Goa	Tier 2	Interview from Survey
11	26-35	Gurgaon	Tier 1	Interview from Survey
12	26-35	Mumbai	Tier 1	Interview from Survey
13	26-35	Bangalore	Tier 1	Interview from Survey
14	26-35	Delhi	Tier 1	Interview from Survey
15	26-35	Gurgaon	Tier 1	Interview from Survey
16	36-45	Bangalore	Tier 1	Interview from Survey
17	26-35	Jaipur	Tier 2	Interview from Survey
18	26-35	Nagpur	Tier 2	Usability Testing
19	26-35	Nagpur	Tier 2	Usability Testing
20	26-35	Nagpur	Tier 2	Usability Testing

Survey Details

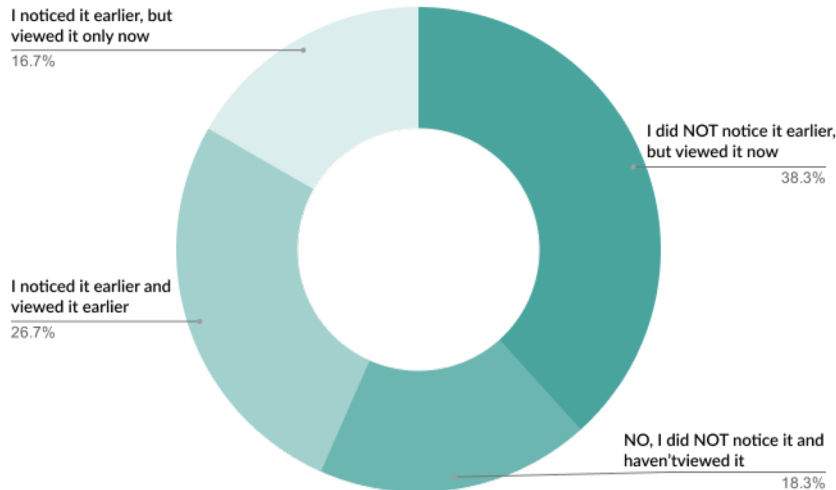

To gather initial insights, a **survey was floated on Instagram** (Asmita's handle) on 15th Jan, receiving 60 responses over 5 days.

The participation was skewed more towards 18-35 year old respondents.

Campaign Awareness & Activation

16.7% Ignored the banner when they saw it by themselves

Users who have seen Memorylane on the app recently

38.3% saw the banner & campaign only because of the survey

There's a possibility that these **18.3%** are not eligible for the campaign

Campaign Banner Visibility

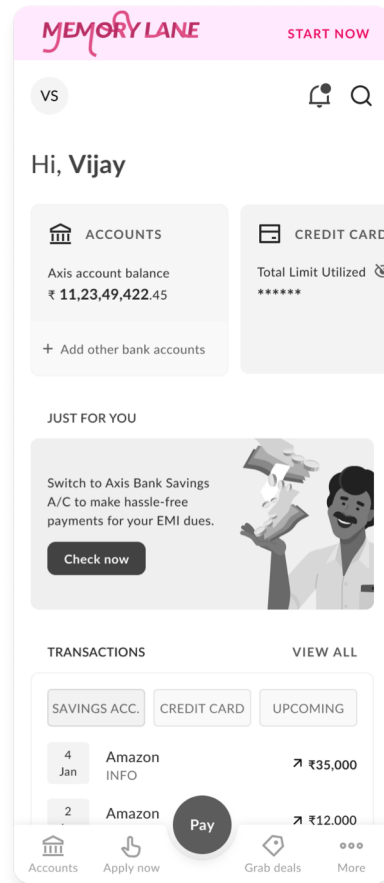

The animated movement drawing attention is the major reason for the campaign's discoverability.

But at the same time, the user's intent of being on the app in that moment, influences this discoverability as well as the choice to open the campaign.

- **Participants that did not readily see the banner:**
 - Initial discovery attempts were focused on familiar entry points such as the search bar, bottom navigation, accounts, profile section, and services and more.
 - After being prompted to focus on the dashboard, the animation eventually drew attention.
- **Participants that needed to be pointed to the banner:**
 - They did not expect it to be placed at the extreme top, stating they often ignore that space as their routine usage happens at the centre of the screen or below.

"mera dhyaan hi nahi gaya waha pe..me niche hi search kar raha tha..mera dhyaan hi nahi gayi ki main upar bhi dekh sakta hu..kabhi dekhta nahi main yaha..first time, wo bhi aapne bola isi screen pe hai aur wo saamne achanak se popup ho gaya isliye dikh gaya"

- 31 year old, Nagpur

Campaign Activation

User Behaviour I

Completely miss the banner.

Reason(s)

They often ignore the banner space as the interaction for their banking needs is sufficed by the dashboard and features below it.

User Behaviour II

See the banner and ignore it.

Reason(s)

They want to focus on their task at hand and the banner doesn't seem important

The banner doesn't seem interactive as they miss the delayed CTA or it does not look like a button.

User Behaviour III

See the banner and open it.

Reason(s)

They are familiar with 'recaps' and are curious to check what a banking app has to offer.

"To be honest, I have been using Axis Bank for a very long time. So matlab main kaafi cheezein itna ignore kar deta hoon main. Like I just open the app, check my balance and then close the app. I've never come to the app to just check if there is anything new. I use the app with a high intent ki mere ko ye kaam hai, mere ko ye karna hai aur mere ko ye karke nikalna hai."

- 26 year old, Gurgaon

Experience of Sound

Majority of the participants in our sample did not experience the sound as they typically keep their device on silent, DND, or low volume.

Among those who did hear it, reactions were varied where some felt it complemented the screens, while others found it slow-paced.

"I generally use my phone on DND ya toh hamesha silent mode me use karta hoon...I don't get a ring also in my mobile phone."

- 37 year old, Bangalore

Navigation behaviour

Skipping or Moving Ahead

Going to the 'real' insights

- The ⊗ icon was interpreted as a **skip control**, as participants **did not expect** insights in a **status/slide format in a banking app** and **instead assumed the campaign as a precursor to it**.

Check first, engage later

- Participants **casually browsed**, as they first wanted to understand what's in it before deciding to engage.
- Skipping or moving ahead was also driven by **technical issues or late loading**.

Going Back

Fast Autoplay Speed

- Going back was observed **when autoplay moved faster than users' reading pace** (english comprehension levels are varied, not all can read and understand in one go).

Pausing to pay attention

- Holding down to pause was a learned habit from other platforms (like IG, WhatsApp) not a natural interaction. **Users mainly did it when they wanted to focus more or needed extra time to read.**

Interaction with Insights

Speed affected engagement

- Autoplay frequently moved faster than users' reading pace, **limiting deeper engagement.**

Wanting to dive deeper

- Participants clicked on a certain insights to get more details as they wanted to learn more about it. Ex. clicking on *Edge Reward* insight to **understand or redeem it**

Visual Hierarchy

- Reading sequence followed visual hierarchy (Number → Title → Description) but **engagement remained surface-level**, with a tendency to skim **via product names** rather than fully read the content

"credit card...reward points...Life insurance...NPS bhi dikha raha hai"
- 25 year old, Nagpur

"wo hi yaad hai.. 10 ki FD banayi thi...aur premium ki amount"
- 26 year old, Nagpur

User Perception of Insights

Those that were unfamiliar with recaps

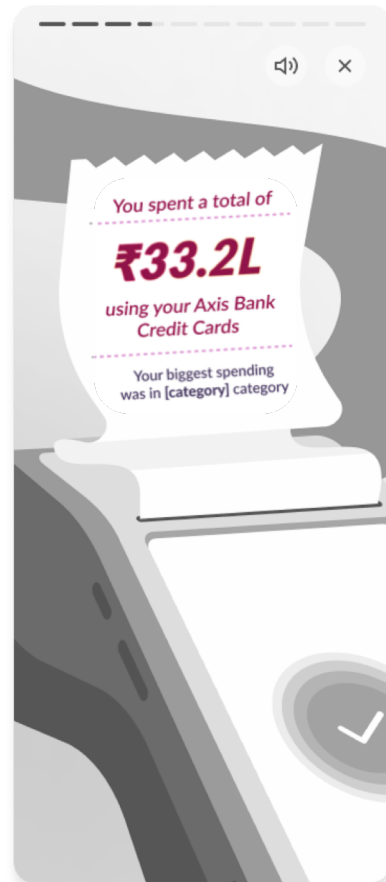

- The **format felt novel and interesting**, but participants required time to understand that the campaign was a personal recap, indicating a **need for clearer communication** at the start.

Those that were familiar with recaps

- **Curiosity** of how a banking app provides a recap, **drove initial engagement**.
- While the insights were appreciated, they expressed a **need for more detailed and in-depth information**.

"I was not sure although ki wo itna transaction aaya kaise. There was one slide in which they showed some X number, and that X number is very big in terms of my transaction. So I was not sure ki ye aaya kaise. Then I just thought ki thik hai, matlab I was also worried ki itna itna to tax bhi nahi ho raha hai jitna ye dikha diya number. So I don't know, and I then ignored it and moved forward."

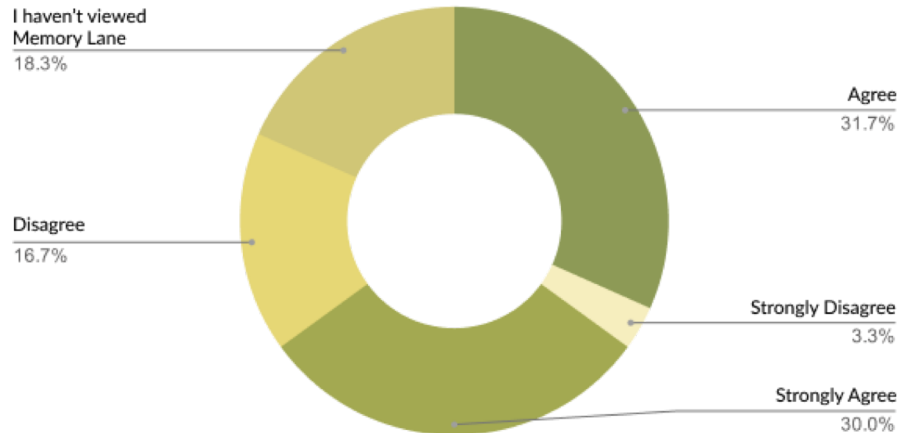

- 26 year old, Gurgaon

Perception of Campaign- Personalisation

Around 62% agreed that Memory Lane felt it was personalised for them

- The insights were particularly recognised as contributing to a personalised experience.
- But participants wanted to dive deeper. Personalisation felt limited as the insights lacked sufficient detail (e.g., breakdowns or actionables).
- The quiz was consistently seen as lacking personalisation, which affected its overall engagement.

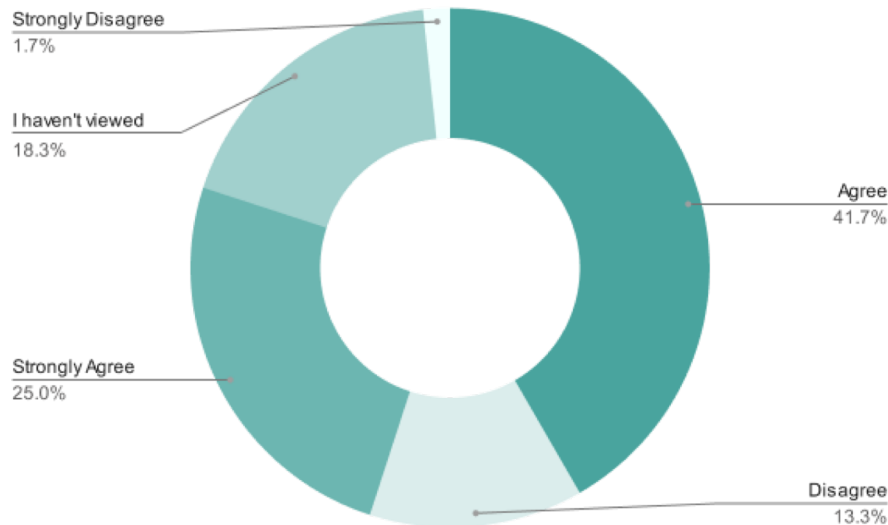

Users who felt Memorylane was personalised for them

Perception of Campaign- Usefulness

Almost 67% agreed that Memory Lane had given them useful information

- When users felt they learned something new or could reflect on their usage, the experience was perceived as useful.
- Value dropped when insights were generic, obvious, or lacked sufficient depth and personalisation, offering little incremental benefit.
- The quiz lacked a clear purpose in the absence of a visible outcome or reward, giving users little reason to engage.

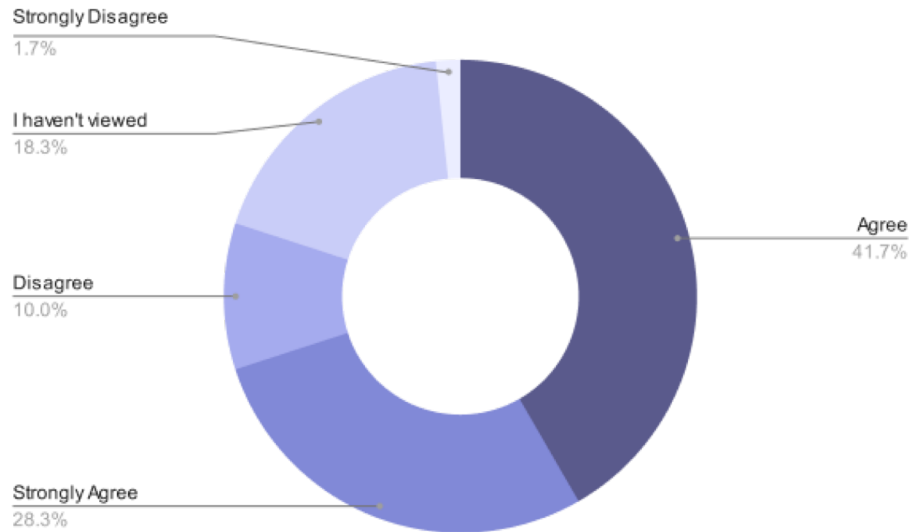

Users who felt that Memorylane had given them useful information

Perception of Campaign- Enjoyment

62% agreed that Memory Lane was fun & enjoyable

- The format stood out due to its novelty within a banking app context.
- Visually presented insights made information easy and quick to consume compared to static formats like PDFs.

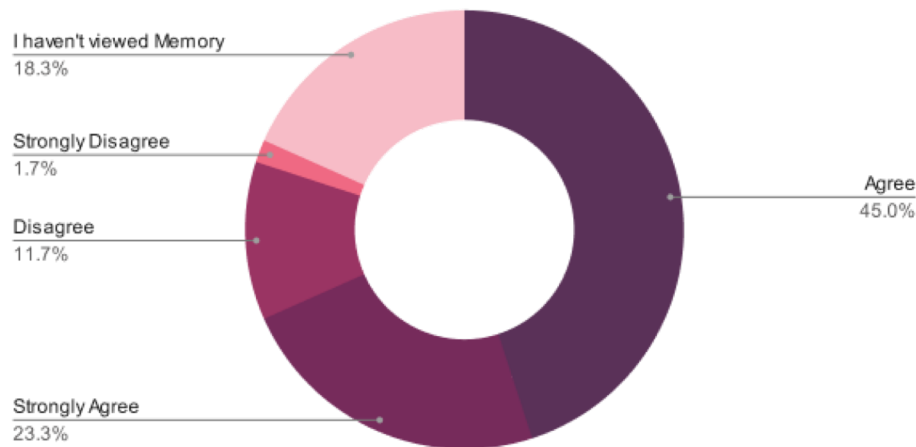

Users who felt that Memorylane was fun & enjoyable

Perception of Campaign- Gamification

Almost 68% agreed that Memory Lane was gamified

- The quiz was particularly recognised as contributing to a game-like experience.
- However, this did not consistently drive engagement, as these elements were not always perceived as sufficiently interesting or rewarding.

Users who felt the experience was game-like or had game-like features

Engagement with Quiz

Did not attempt

They **did not** perceive it as a quiz due to **lack of clear labelling** and its placement within a story format.

Instead they **expected something to be revealed** (consistent with the previous 'insight' slides).

Attempted all

These were people **who've seen recaps elsewhere** and are familiar with such additions in it.

However they pointed that the **quiz is generic** and has no personalisation or relatability, which **made it boring**.

Attempted partial

The **questions were generic** (about Axis Bank) which **created a disconnect** and confused whether it had to be attempted.

Others felt unsure whether they have to click as **till that point, there was no interaction required**.

"pata nahi chala question hai...apna hai ya customer ka hai isliye nahi kiya..mujhe laga mera investment hai ki 'aapne itna kiya' lekin wo customers ka question tha".

- 27 year old, Nagpur

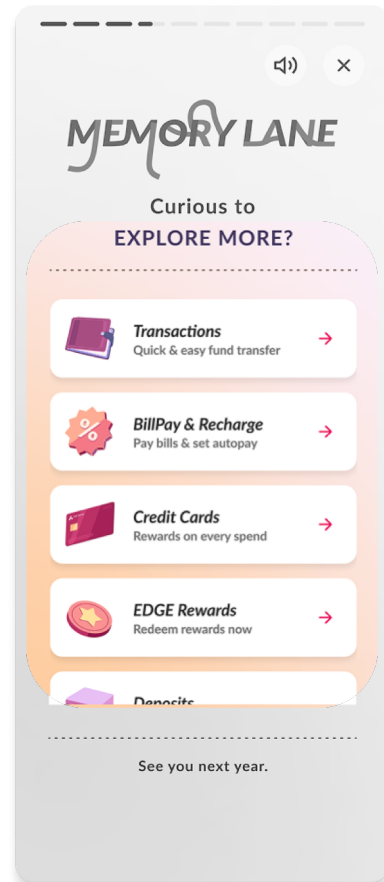

"Han han dekha tha..achcha wo quiz tha kya, humko teen hi cheez dikh, quiz me to chaar option hota haina...isliye samjha nahi".

- 36 year old, Badlapur

Memorylane: Explore More

- The Explore More section was **commonly interpreted as cross-selling**, with **no clear or immediate benefit**, limiting motivation to explore.
- Users **were generally aware of the products** but did not feel the need to engage without a specific goal.
- The **experience helped create awareness of certain features (e.g., Bill Pay)** that users were **not previously engaging with**, primarily because their app usage is typically limited to a few habitual tasks.
- However, **deeper exploration remained limited**, as users **primarily used banking apps for quick tasks**, staying focused on immediate goals and not engaging beyond what was necessary.

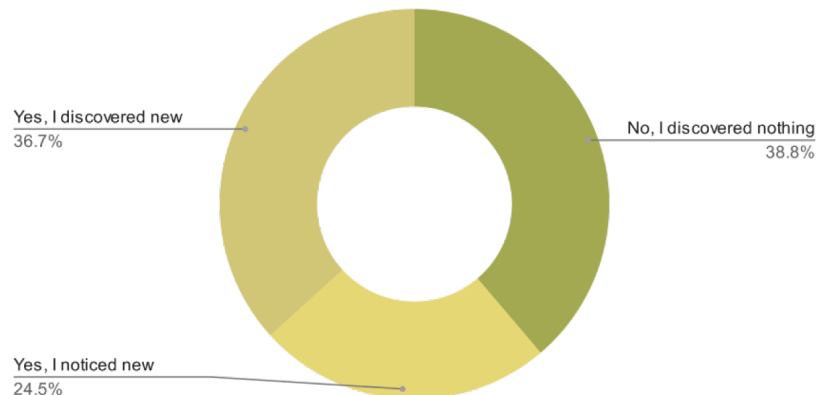

Memorylane: Explore More

Almost 62% voiced that they discovered new products and services via Memorylane campaign.

Behaviours

- **Browsing remained surface-level**, as **financial products require intentional decision-making** rather than casual exploration.
- In some cases, the **options were misunderstood as an extension of the campaign**, with expectations of deeper insights.
- **Engagement** (GrabDeals) was **mostly limited to familiar or prompted use**, while interest in Credit Cards and Investments was hindered by session timeouts.

Users who discovered products through Memorylane that they were unaware of

"I have five banking apps selling me their products every day. I don't want to discover any more."

- 34 year old, Delhi

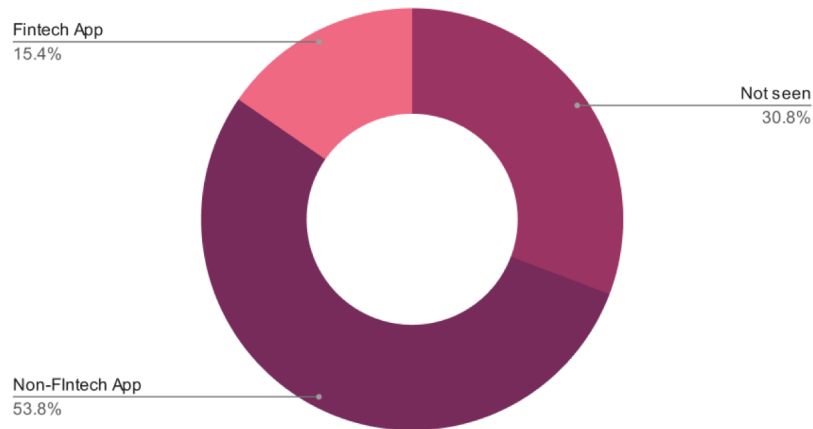

"I mean if I need to deposit or get an insurance I like want to do it actively myself so I'll open my Axis Bank app with that intention of like making a deposit or completing a bill payment. I don't think it triggers at least for me it triggers that I need to make a deposit or I need to make an investment or something like that."

- 29 year old, Jaipur

Comparison With Other Recaps

Almost 54% had seen recaps outside banking/fintech, 31% were unaware or hadn't seen any, and 15% had encountered recaps within fintech.

- Users drew comparisons with recap experiences such as Spotify (17.2%), CRED (10.3%), Swiggy (6.9%) and YouTube (3.4%).
- The **format felt familiar**; however, these **comparisons were sometimes seen as less relevant** due to differences in domains.
- These platforms were seen as stronger benchmarks due to **better gamification, more personalised insights**, higher learning value, and greater visibility.

Recaps that users have seen elsewhere

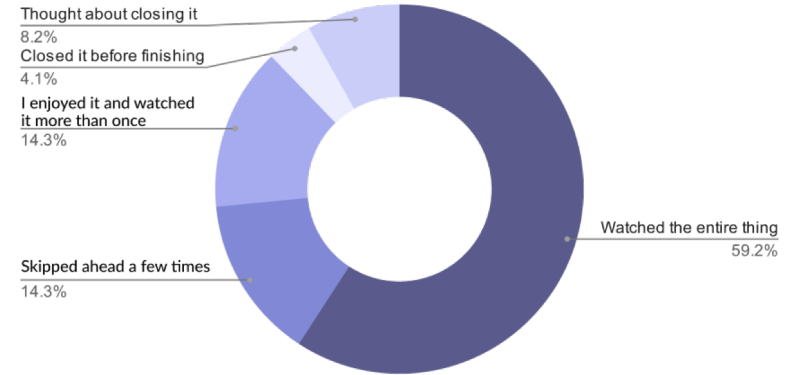

Consumption of Campaign

Almost 71% watched the entire campaign atleast once.

However watching the campaign does not guarantee that users were completely engaged throughout.

"It's pretty basic and very simple. I mean if you ask me personally I mean it didn't give me any value addition. Although the concept is new I have never seen in any other mobile app. So, but then I personally didn't really feel that so much of a value addition. I don't know what is the purpose and why Axis Bank has brought in this, what is the objective of Memory Lane but otherwise it was not very impressive to me."

- 37 year old, Bangalore

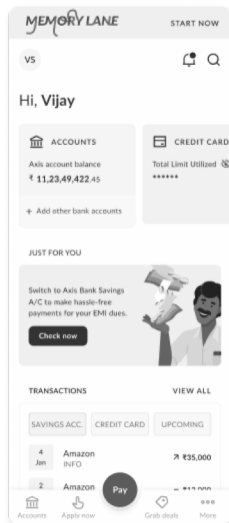

Experience while using Memorylane

"Day to day ye update hota hai kya?...shayad hota hoga...qki ye WA status jaisa lag raha aur hum har din ka same status nahi rakhte hai, update karte hai, isliye laga."

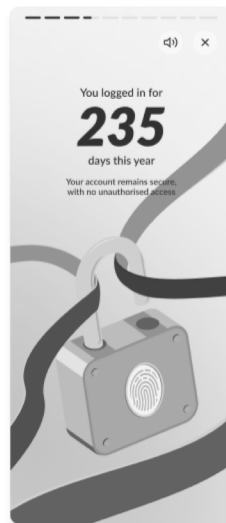

- 25 year old, Nagpur

Engagement Level in a Snapshot

BANNER

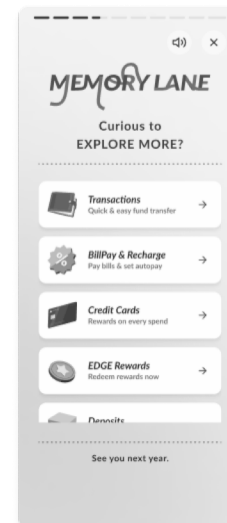

INSIGHTS

QUIZ

EXPLORE MORE

Overall Feedback

What Worked?

Visual experience

- Continues to drive engagement and when combined with the format, makes insights easy and quick to consume.

Insights are valuable

- Stronger perception of reflection and learning when insights feel relevant.

Product discovery

- Still creates awareness (e.g., features like Bill Pay), though exploration remains limited.

What Can Be Reworked?

Enhanced value & utility

- Users would like to understand what they can do with the insights or expect rewards.

Deeper personalisation & gamification

- The quiz needs to be relatable, have a payoff (like scores), and some output.

Proposition of 'Explore More'

- This section is perceived as 'cross-sell' and users want to be intentional about banking product explorations.

New Learnings & Suggestions

Engagement is intent-driven

Users stay task-focused; campaigns are secondary unless immediately relevant.

Surface-level interaction

Users skim insights; deeper exploration is rare without clear motivation.

Flow impacts engagement

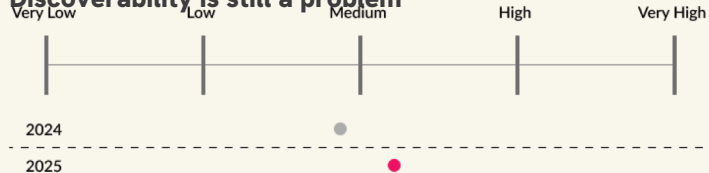

Speed, navigation expectations, and unclear interactions reduce engagement.

Performance issues and lack of depth reduced perceived value:

- Addition of more detailed insights to improve usefulness (e.g., transaction breakdowns, spending patterns).
- Improve banner attraction to enhance activation.
- Sustaining engagement moving away from Axis Bank-centric questions.
- Fine tuning format for enhanced experience.

Memory Lane Campaign: Experience Evolution (2024 → 2025)

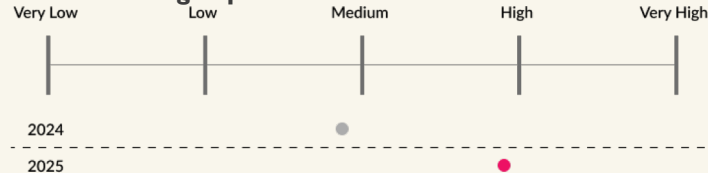

Discoverability is still a problem

- In **2024**, people missed the banner because they **open the banking app with a specific task**.
- In **2025**, the animation helped, but **16.7% still ignored the banner**.

So → **even if the campaign is better, people still miss it because of how they use banking apps.**

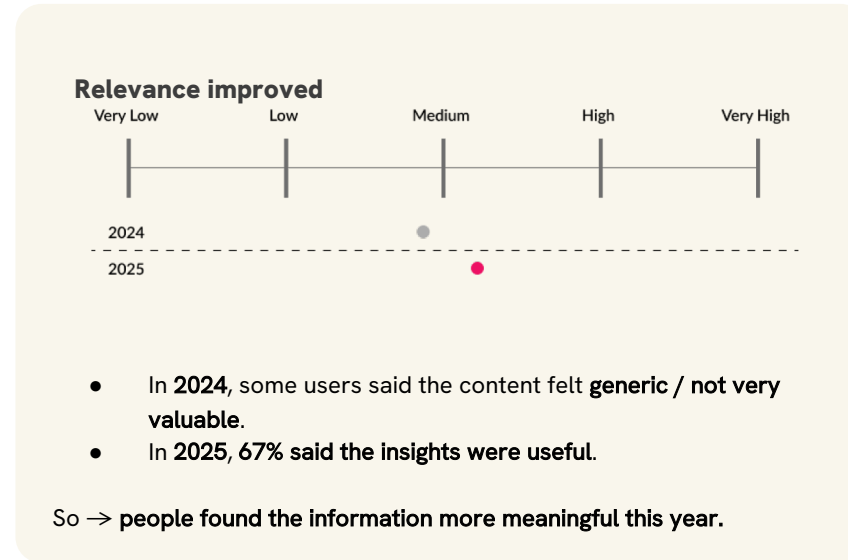

Understanding improved

- In **2024**, users got the idea of the recap but **badges, titles, and terms confused them**.
- In **2025**, **71% watched the campaign fully**, meaning they could **follow the flow better**.

So → **people could understand and go through the campaign more easily.**

Memory Lane Campaign: Experience Evolution (2024 → 2025)

- The 2025 campaign improved the perceived usefulness of insights and made the recap easier for users to follow. However, discoverability remains a challenge as users primarily open the banking app with a specific task and may overlook promotional banners.

Thank You
